Subject: Upper North Island Grid

I object to Transpower's proposed powerline for reasons as follows:-

Many acres of beautiful land will be spoilt by the erection of huge ugly pylons. Each pylon will need a big piece of land to accommodate it plus the land under the cables between each pylon will be adversely effected.

No one should be exposed to the harmful electronic magnetic radiation and risk poor health as a consequence.

I strongly believe that there is a better way - solar power, gas, wind farms and power conservation.

The original backbone for the national grid was intended to be HVDC to link with the undersea cable across Cook Strait. This is a much more desirable infrastructure as the pylons are on a much smaller scale and there are less side effects from a health perspective.
