

The evidence we intend to present is. 11/2/08

- ① Auckland needs to access other sources of power
- ② Transpower + The body before them has allowed the supply infrastructure to be run down and the pylon plan is the easy way out.
- ③ Weather bombs are a reality today and therefore the present supplies cannot be guaranteed so why waste money on the pylon plan.
- ④ The Cook Strait cable is old and the supply not secure -
- ⑤ That is, with temperatures rising the Waikato river is warming + with the power station also heating the water, means that this supply is not secure.
- ⑥ The environmental impact of these pylons are the landscape and peoples lives is unacceptable.
- ⑦ Nuclear power supplied from land near Auckland is the answer.
- ⑧ The effect of these pylons cannot be mitigated. So therefore should not go ahead.

To The Board of Inquiry.
Upper North Island.
Civil Upgrade Proposal.
