In favor of 4a?	No
Reason/s	
Any changes?	Yes
Suggested changes	For Industries, new and existing, develop a policy that will reduce PM 10 emissions by a program for installation of electrostatic filter equipment(proven and already existing technology abroad). Review AS/NZ standards for woodburners. Allow also standards used abroad with same or more strict emission levels i.e. CE Recognize standards (EN15250) used abroad for slow heat appliances for domestic use. This type of appliance performs significantly better than steel stoves, emits less but cannot be covered by AS/NZ standards as method of measurement for efficiency does not match this type of stove. Here definitely opportunities are missed.
In favor of 4b?	No
Reason/s	Still other solutions are possible
Any changes?	0
Suggested changes	
CB accurately reflected?	Yes
How can estimates be improved?	
Any overlooked costs?	Industry could do investments in filter equipment. This is not too costly
