In favor of 4a?	No
Reason/s	Yes/no decisions are too simplistic. I have been asked to respond to getting our air cleaner, anywhere, locally, nationally or world-wide. This requires constant fine-tuning with NO universal deadlines ever. I am even concerned from a far away place, like my home of Prince George, British Columbia in Canada. The idea must be for individuals to care more about particulate, so they should be encouraged to reduce smoking, stop using candles; barbecues, gas lawn movers, etc. Heating with wood is a no-brainer near others in crowded places. As to industrial pollution the long-term health of the masses must be included into any cost/benefit analysis and thus the jobs/riches for the few must face increasing regulation.
