Further comments on the proposed NES for Plantation Forestry

Private individual

I am extremely disappointed in the 10m setback from adjoining land (neighbour). This distance should be much more (refer to my submission). Maybe the panel needs to have a look at this problem from my side of the boundary fence. I am more than willing to assist in this if required. The working party should come out and walk the fence to see the problems that exist. The local council came out and had a look and the planner was blown away says it completely changed the way she thought about it.

The same old problems exist. At the time of the submission had one over spray and now there have been four. It resulted in damage to about 100ha of the farm and between $50-55,000 damage.

A 10m setback is nowhere near sufficient. Shading occurs 300-400m out onto paddock which affects grass growing ability.
