Objectives for the contribution

Do you agree with these objectives for our contribution?   No

1b. What is most important to you?
Truth. There is a raft of lies and false information put into the media. Research the problem accurately and do not use hockey stick statistics.
Do not ruin this country by taxing for a non existent problem.

What would be a fair contribution for New Zealand?

2. What do you think the nature of New Zealand’s emissions and economy means for the level of target that we set?
The amount of carbon produced in New Zealand is negligible so there is no need for any target.

How will our contribution affect New Zealanders?

3. What level of cost is appropriate for New Zealand to reduce it’s greenhouse gas emissions? For example, what would be a reasonable reduction in annual household consumption?
There is no level of contribution required as there is no man made problem. There is no enemy but those who wish to fleece New Zealand citizens.
Follow Australia’s lead and put more money in the citizens' pockets.
The government is supposed to serve the country not the United Nations.
If the government would cease overseas travel for its politicians and entourages that would be sufficient contribution. Surely in this electronic age they could interface by computer.

4. Of the opportunities for New Zealand to reduce its emissions (as outlined on page 15 of the discussion document), which do you think are the most likely to occur, or be most important for New Zealand?
There is no need. My science teacher in the third form taught me that matter is neither created nor destroyed. Carbon is carbon is carbon. It is not the baddie that the greenies portray. Therefore there is no need to fight a non existent enemy. We do not need to reduce emissions.
Who should pay for the volcanoes emitting carbon?

Summary

5. How should New Zealand take into account the future uncertainties of technologies and costs when setting its target?
Consultation on setting New Zealand’s post-2020 climate change target

Copy of your submission

Precisely by asking how do we control the lunatic fringe who don't believe in the truth. Don't mention hockey stick to them. They don't want to understand.
Leave the money in the pockets of the taxpayer and the rural overseas money earners.
Leave the money for the taxpayer to decide.

Other comments

6. Is there any further information you wish the Government to consider? Please explain.
Fact. There has been no increase in global temperature in the past 15 years.
Fact. Our nearest global partner has pulled out of the global warming fiasco and has put more money back into the pockets of its citizens.
Fact. Contributing money (taxpayers money) to the United Nations will do nothing to reduce global warming.
Fact. This government is too weak to stand for truth and has given control to the greenie fringe.

I suspect that there will be no response to this submission because it disagrees with the greenie mentality rather than believing in truth.
