Objectives for the contribution

Do you agree with these objectives for our contribution? No

1b. What is most important to you? Immediate carbon capture. Pine trees are easiest

What would be a fair contribution for New Zealand?

2. What do you think the nature of New Zealand's emissions and economy means for the level of target that we set? Meaningless question

How will our contribution affect New Zealanders?

3. What level of cost is appropriate for New Zealand to reduce its greenhouse gas emissions? For example, what would be a reasonable reduction in annual household consumption? Cost of running a car and an overseas trip per year

4. Of the opportunities for New Zealand to reduce its emissions (as outlined on page 15 of the discussion document), which do you think are the most likely to occur, or be most important for New Zealand? Fewer cows

Summary

5. How should New Zealand take into account the future uncertainties of technologies and costs when setting its target? Forget about it, act now

Other comments

6. Is there any further information you wish the Government to consider? Please explain.
Stop DOC burning avgas on helicopter spraying glyphos on self seeded pines. The perfect carbon capture agents... And DOC declares war on them... High insanity
