I support the overall goal of the proposals that recognise the value of indigenous biodiversity to New Zealand, its people, and communities, and to ensure that Indigenous Biodiversity is both protected and restored.

New Zealand's sheep and beef farmers have retained 2.7 million hectares of indigenous habitat within their farms which is testament to the value farmers place on indigenous biodiversity. As much as 24% of New Zealand's total indigenous habitats occur on the 8.8 million hectares covered by sheep and beef farms, with over 47% of QEII covenants being on sheep and beef farms. The area of indigenous habitats formally protected by QEII, Nga Whenua Rahui, and other covenants is growing.

I support provisions which recognise that for conservation actions to be enduring, they require landowner and community support and leadership. Policies need to recognise that people are critical to maintaining and enhancing biodiversity while acknowledging, respecting and fostering the contribution landowners, as custodians and Kaitiaki, make to these habitats and species.

However, I oppose provisions which seek to 'lock up indigenous biodiversity' and in so doing penalise those landowners who have done the most to protect indigenous biodiversity. I seek changes to the policy to ensure that indigenous biodiversity can be integrated within pastoral based land uses and activities, and which recognise these can co-exist for mutual benefit.

Indigenous biodiversity should be considered as an asset to the farming business, and communities, and not as a liability. Subtle but significant changes to the NPSIB are required to ensure that existing conservation efforts are rewarded, and ongoing conservation is supported and incentivised. The recognition of the values of indigenous biodiversity as part of pastoral based landscapes and farming businesses is required to ensure that these values, habitats, and species, are sustainably managed. A strong regulatory or stick approach to the recognition and ongoing management of indigenous biodiversity could, if not carefully constructed, undermine existing and future conservation efforts.
Impacts and implementation:

- I am deeply concerned about the potential impacts of these proposals on my farm in relation to areas being identified as Significant Natural Areas (SNA's), areas identified as being important for the protection of SNA's which may include land adjacent to SNA's, and the identification of highly mobile species, in relation to the impacts this may have on my farming business and its resilience and viability. The provisions could be interpreted as precluding the ongoing grazing of animals adjacent to and within these areas, which means that those that have done the most to protect indigenous habitats and species within their farming businesses could shoulder the greatest costs including restrictions on their farming businesses.

- The compliance costs of the various proposals are likely to be significant and include the identification of these habitats and species, fencing of these habitats (could require deer fencing to manage wild populations), and ongoing pest management. As currently proposed, it is unclear where these costs fall. Financial, technical, and human resourcing support should be provided to assist landowners to continue to protect and restore indigenous habitats and populations within their farming businesses and communities. Support should be provided only to areas where indigenous biodiversity is being restored, but also to where it currently exists.

- I am concerned that New Zealand does not currently have the extent of technical expertise available to assist regional and district councils to identify SNA's and mobile species across their territorial areas within the next five years, to ground truth this work, and to work with farmers. The requirements on regional and district councils including timeframes should ensure that the identification of these habitats and species is robust and is undertaken in a way which engages landowners and communities, builds understanding and knowledge, and which empowers local conservation efforts.

- The time frames for this mapping and recording is too short and for a thorough job to be done would require at least ten years.

- A full cost analysis must be completed before this programme starts.

Hutia Te Rito:

- Support with amendments.

- I support the objective of local authorities recognising and providing for Hutia Te Rito which recognises the relationships between indigenous biodiversity and people and communities, and that conservation requires kaitiakitanga and custodianship.

- I seek that the term "stewardship" is replaced with "custodianship" which more correctly reflects the values I place on indigenous biodiversity within my farm and as part of my family's history and our future, and our relationship and ties to our land.

- I support provisions which recognise and empower ground up, landowner, and community led conservation actions, and which prioritise non regulatory over regulation management frameworks.

3.7 Social, economic and cultural wellbeing:

- Support with amendments.

- I support the recognition that the maintenance of indigenous biodiversity can occur while still providing for use and development.

- I support the recognition that people and communities are critical to conservation actions and the protection and enhancement of indigenous biodiversity.

- I support provisions which empower and support landowner and community conservation activities and local approaches.
I seek that 3.7 is amended to recognise the importance of providing for farming land uses and business resilience, in supporting indigenous biodiversity protection.

- I seek that the NPSIB be amended so that policies and rules reflect Objective 3.7 including prioritising non regulatory approaches and partnerships over regulatory frameworks, and the establishment of conservation frameworks which recognise that the protection and where required enhancement of indigenous biodiversity can be provided within pastoral based farming land uses and alongside pastoral based activities, and that these are not mutually exclusive. This is very important.

3.8 Identifying Significant Natural Areas:

- Oppose.
- I support the intent of 3.8 in identifying Indigenous Biodiversity which is significant. However, the criteria appears really broad and in my opinion could capture any indigenous biodiversity irrespective of how common it is. Because the criteria is broad and examples are not provided of what habitats and species it is intended to cover, it is difficult for me to work out what it means to my farming business, and community.
- I seek changes to provision 3.8 so that the significance criteria are narrowed so that only habitats or species which are endangered, or threatened, are identified. Management frameworks can then be tailored to the level of risk that the habitat faces and the values that underpin the habitats significance.
- Amend provision 3.8 so that a habitat that is identified as "threatened" is only included if it is 0.25ha or greater and contiguous.
- Amend provision 3.8 so that a habitat that is identified as "rare" if only included if it is 0.5ha or greater and contiguous.
- Amend provision 3.8 so that a habitat that is identified as "at risk" is only included if it is 1ha or greater and contiguous.
- Exceptions can be provided for but should be specified in the regional or district plan.
- I seek any consequential amendments to ensure provisions are aligned in identifying and then establishing management frameworks specific to the risk status of the habitat e.g. "rare", "threatened", or "at risk".
- I support the identification of areas with significant indigenous plants and or species, by experts working with communities and in partnerships with landowners. This assessment should be undertaken in a consistent manner, with the significance of habitats verified or refined through an on the ground assessment, rather than just through reliance on spatial maps.
- I oppose the requirements on local authorities that the assessments have to be completed within 5 years. This is because it is unlikely that the technical expertise is available within New Zealand to be able to undertake the assessments appropriately including through on the ground verification of the significance of habitats, in partnership with landowners. This is very important.
- I seek that provision 3.8 is amended to enable local authorities the time to undertake this work in a robust manner. The ability for experts to work with landowners in identifying these habitats and in informing the ongoing management of these habitats within pastoral based land uses and activities, is an essential element to providing successful and enduring conservation outcomes.

3.9 Managing adverse effects on SNA's

- Support with amendments.
- I support requirements to manage new activities that affect significant natural areas.
- I seek that 3.9 is amended so that the effects management hierarchy is based on the
level of the habitats significance e.g. "endangered" or "threatened", and is tailored to
the values which underpin the habitats significance.

- Amend 3.9 so that the requirements relates to consent applications and the
  assessment of effects, and requirements to avoid, remedy, or mitigate the effects.
  New activities should be provided for where the effects of the activity on the values
  that underpin the habitats significance (such as representativeness, rarity, and
  distinctiveness) can be avoided, or remedied, or mitigated.

- Amend provisions so that the ability to offset effects should only be provided for
  where the offset can occur in the same ecological area. The ability to offset an
  activity in the urban environment, onto the rural environment should not be enabled.

3.12 Existing activities in SNA's

- Oppose.

- I support the intention of providing for existing activities, but am concerned that
  3.12 as proposed does not do this.

- I seek that 3.12 be amended to specifically provide for the following activities within
  and adjacent to an SNA and areas identified as important for mobile species, where
  this is an existing activity:
  - Grazing of productive animals;
  - Pasture renewal;
  - Cultivation;
  - Vegetation clearance.

- I seek that 3.12 be amended so that the temporal and spatial nature of existing
  activities as part of pastoral based farming are recognised. Specifically, vegetation
  clearance, cultivation, or pastoral renewal, that may occur within a 7-year rotational
  basis, along with the pastoral grazing of livestock that also may be temporal in
  nature for example during drought periods.

- I seek that 3.12 be amended so that existing activities are provided for as a permitted
  activity. Where consents are required, then the effects of an activity should be
  assessed in relation to the attributes which underpin the significance of the habitat
  such as representativeness, rarity, and distinctiveness.

- I seek that 3.12 be amended to delete requirements to maintain or protect
  the'ecological integrity' of a habitat, where the'ecological integrity' of the habitat
  may have been impacted prior to notification of the NPSIB e.g. through existing
  impacts on the habitats ability to regenerate.

- I seek that 3.12 be amended to delete restrictions on the ability to undertake an
  existing activity in areas which have become SNA's.

3.13 General rules applying outside SNA's:

- I support the intention of recognising areas around SNA's as important for protecting
  SNA's themselves and their values.

- I seek amendments to 3.13 to ensure that existing activities as outlined under 3.12
  are provided for. I am concerned that 3.13 as proposed may result in areas of my
  farm around my SNA's being'locked up' from pastoral based farming activities. This
  could result in significant areas of my farm being impacted which ultimately would
  significantly impact my farm viability and resilience.

- I seek that 3.13 is amended to prioritise non regulatory, partnership, and landowner
  led approaches to managing areas around SNA's in order to protect the attributes that
  make a SNA significant. I seek that clause (2) is deleted.

- I seek that 3.13 is amended to prioritise engagement with the technical expert and
  landowner to co design management frameworks for the farm which ensures that
  indigenous biodiversity is provided for as an inherent and integral part of the
farming business. These plans can be provided for through tailored Farm Plans bespoke to the biodiversity values and the farming business.

3.15 Highly Mobile Fauna:

- Support with amendments.
- I support the intention to recognise and provide for highly mobile fauna through non regulatory/ partnership-based frameworks generally, and where required regulatory approaches in relation to new subdivision, and development.
- I oppose provisions which seek to mandate this protection through regulatory frameworks where this may impact on existing activities and land uses. Enduring and effecting conservation approaches to protect these species are best achieved through working with landowners, and in particular the role of the expert in working with landowners to build understanding of these species, their values, and any management which is required for these populations to be healthy and resilient.
- I seek that 3.15 is amended to prioritise non regulatory, partnership, and landowner led approaches to managing mobile species and their habitat and lifecycle requirements.
- I seek that 3.15 is amended to prioritise engagement with the technical expert and landowner to co design management frameworks for the farm which ensures that mobile species is provided for as an inherent and integral part of the farming business. These plans can be provided for through tailored Farm Plans bespoke to the biodiversity values and the farming business.

Other comments:
I farm with my wife, three son's and their families under the in the Tararua District. It is a sheep and beef breeding business.
My sons are passionate livestock farmers who respect biodiversity but also wish to part of a profitable farming enterprise, now and in the future.

We have fenced off creek margins to allow regeneration of native flora and have an active pest control programme.
