DRAFT NATIONAL POLICY STATEMENT FOR INDIGENOUS BIODIVERSITY

Submission on the publicly notified draft National Policy Statement for Indigenous Biodiversity.

On: Ministry for the Environment – draft National Policy Statement for Indigenous Biodiversity.

To: Ministry for the Environment

Personal Information

Contact person: [REDACTED]

Address: [REDACTED]

Region*: Southland

Country: New Zealand

Phone: [REDACTED]

Email*: [REDACTED]

General responses to the proposals:

- I support the overall goal of the proposals that recognise the value of indigenous biodiversity to New Zealand, its people, and communities, and to ensure that Indigenous Biodiversity is both protected and restored.
- We own [REDACTED] Southland, it has [REDACTED], cows are wintered off the property. The remaining [REDACTED] is buildings, wetlands, native bush, duck ponds and rivers with an average of 6m setback from the river.
- We also farm at Wyndham which is on the outskirts of the township at Wyndham, Southland, this is [REDACTED]. The cows are wintered off. We are in the process of recreating a wetland that covers [REDACTED] that ties in with an oxbow [REDACTED]. In this wetland are giant kokopu which the local school is studying through their science programmes. The community is involved with in the restoration of the wetland and the management of the area.
- I support provisions which recognise that for conservation actions to be enduring, they require landowner and community support and leadership. Policies needs to recognise that people are critical to maintaining and enhancing biodiversity while acknowledging, respecting and fostering the contribution landowners, as custodians and Kaitiaki, make to these habitats and species.
- However, I oppose provisions which seek to 'lock up indigenous biodiversity' and in so doing penalise those landowners who have done the most to protect indigenous biodiversity. I seek changes to the policy to ensure that indigenous biodiversity can be integrated within pastoral based land uses and activities, and which recognise these can co-exist for mutual benefit.
- I would also ask that owners of the land who have "developed " the land to maximize production in the last 15 years to restore the mana of the land and water in which they have effected, to respect the biodiversity that existed in these areas, and to enable the biodiversity habitat to enable species to survive, If the wetland or habitat removal has

been to enable capital development, that a similar area be restored in proximity to the degeneration of the site removed or altered

- Indigenous biodiversity should be considered as an asset to the farming business, and communities, and not as a liability. Subtle but significant changes to the NPSIB are required to ensure that existing conservation efforts are rewarded, and ongoing conservation is supported and incentivised. The recognition of the values of indigenous biodiversity as part of pastoral based landscapes and farming businesses is required to ensure that these values, habitats, and species, are sustainably managed. A strong regulatory or stick approach to the recognition and ongoing management of indigenous biodiversity could, if not carefully constructed, undermine existing and future conservation efforts.

Impacts and implementation:

- I am deeply concerned about the potential impacts of these proposals on my farm in relation to areas being identified as Significant Natural Areas (SNA's), areas identified as being important for the protection of SNA's which may include land adjacent to SNA's, and the identification of highly mobile species, in relation to the impacts this may have on my farming business and its resilience and viability. The provisions could be interpreted as precluding the ongoing grazing of animals adjacent to and within these areas, which means that those that have done the most to protect indigenous habitats and species within their farming businesses could shoulder the greatest costs including restrictions on their farming businesses.
- The compliance costs of the various proposals are likely to be significant and include the identification of these habitats and species, fencing of these habitats (could require deer fencing to manage wild populations), and ongoing pest management. As currently proposed, it is unclear where these costs fall. Financial, technical, and human resourcing support should be provided to assist landowners to continue to protect and restore indigenous habitats and populations within their farming businesses and communities. Support should be provided only to areas where indigenous biodiversity is being restored, but also to where it currently exists.
- I am concerned that New Zealand does not currently have the extent of technical expertise available to assist regional and district councils to identify SNA's and mobile species across their territorial areas within the next five years, to ground truth this work, and to work with farmers. The requirements on regional and district councils including timeframes should ensure that the identification of these habitats and species is robust and is undertaken in a way which engages landowners and communities, builds understanding and knowledge, and which empowers local conservation efforts.

Hutia Te Rito:

- Support with amendments
- I support the objective of local authorities recognising and providing for Hutia Te Rito which recognises the relationships between indigenous biodiversity and people and communities, and that conservation requires kaitiakitanga and custodianship.
- I seek that the term "*stewardship*" is replaced with "*custodianship*" which more correctly reflects the values I place on indigenous biodiversity within my farm and as part of my family's history and our future, and our relationship and ties to our land.
- I support provisions which recognise and empower bottom up intentions, landowner, and community led conservation actions, and which prioritise non regulatory over regulation management frameworks.

3.7 Social, economic and cultural wellbeing:

- Support and seek it be retained as notified.
- I support the recognition that people and communities are critical to conservation actions and the protection and enhancement of indigenous biodiversity.
- I support provisions which empower and support landowner and community conservation activities and local approaches.
- I support the recognition that the maintenance of indigenous biodiversity can occur while

still providing for use and development.

- I seek that the NPSIB be amended so that policies and rules reflect Objective 3.7 including prioritising non regulatory approaches and partnerships over regulatory frameworks, and the establishment of conservation frameworks which recognise that the protection and where required enhancement of indigenous biodiversity can be provided within pastoral based farming land uses and alongside pastoral based activities, and that these are not mutually exclusive.

3.8 Identifying Significant Natural Areas:

- Support with amendments
- I support the identification of areas with significant indigenous plants and or species, by experts working with communities and in partnerships with landowners. This assessment should be undertaken in a consistent manner, with the significance of habitats verified or refined through an on the ground assessment, rather than just through reliance on spatial maps.
- I oppose the requirements on local authorities that the assessments have to be completed within 5 years. This is because it is unlikely that the technical expertise is available within New Zealand to be able to undertake the assessments appropriately including through on the ground verification of the significance of habitats, in partnership with landowners.
- I support the farm Environment plans reflect the biodiversity of the area and the contribution that the farm acknowledges as value.
- I seek that provision 3.8 is amended to enable local authorities the time to undertake this work in a robust manner. The ability for experts to work with landowners in identifying these habitats and in informing the ongoing management of these habitats within pastoral based land uses and activities, is an essential element to providing successful and enduring conservation outcomes.
- Exclusion of stock but to identification of stock class and grazing regime be required in a plan to ensure the biodiversity to thrive and be nurtured in these SNA areas. This would be enable the farmer to use the land, but to acknowledge that the land supports more than the stock carrying capacity of the farm
- While I support the establishment of a consistent approach to determining whether or not a habitat is significant, I oppose the broad reach of the currently proposed criteria as it is likely to capture all remaining indigenous habitats irrespective of whether they are significant i.e. they are rare, threatened, or at risk.
- I seek changes to provision 3.8 so that the significance criteria are amended so that habitats which are “rare” are identified, “at risk” are identified, or “threatened” are identified. Management frameworks can then be tailored to the level of risk that the habitat faces and the attributes that underpin the habitats significance.
- Exceptions can be provided for but should be specified in the regional or district plan.
- I seek any consequential amendments to ensure provisions are aligned in identifying and then establishing management frameworks specific to the risk status of the habitat e.g. “rare”, “threatened”, or “at risk”.

3.9 Managing adverse effects on SNA's

- Support with amendments
- I support requirements to manage new activities that affect significant natural areas.
- I seek that 3.9 is amended so that the effects management hierarchy is based on the level of the habitats significance e.g. whether it is “rare”, “threatened”, or “at risk”, and is tailored to the attributes which underpin the habitats significance.
- Amend 3.9 so that the provision relates to consent applications and the assessment of effects, and requirements to avoid, remedy, or mitigate the effects. New activities should

be provided for where the effects of the activity on the attributes that underpin the habitats significance (such as representativeness, rarity, and distinctiveness) can be avoided, remedied, or mitigated.

- Amend provisions so that the ability to offset effects should only be provided for where the offset can occur in the same ecological area. The ability to offset an activity in the urban environment, onto the rural environment should not be enabled.

3.12 Existing activities in SNA's

- Oppose
- I support the intention of providing for existing activities, but am concerned that 3.12 as proposed does not do this.
- I seek that 3.12 be amended to specifically provide for the following activities within and adjacent to an SNA and areas identified as important for mobile species, consideration will be given where this is an existing activity:
 - grazing of animals;
 - Pasture renewal;
 - Cultivation;
 - Vegetation clearance.
- I seek that 3.12 be amended so that the temporal and spatial nature of existing activities as part of pastoral based farming are recognised. Specifically, vegetation clearance, cultivation, or pastoral renewal, that may occur within a 7-year rotational basis, along with the pastoral grazing of livestock that also may be temporal in nature for example during drought periods.
- I seek that 3.12 be amended so that existing activities are provided for as a permitted activity. Where consents are required, then the effects of an activity should be assessed in relation to the attributes which underpin the significance of the habitat such as representativeness, rarity, and distinctiveness.
- I seek that 3.12 be amended to delete requirements to maintain or protect the 'ecological integrity' of a habitat, where the 'ecological integrity' of the habitat may have been impacted prior to notification of the NPSIB e.g. through existing impacts on the habitats ability to regenerate.
- I seek that 3.12 be amended to delete restrictions on the ability to undertake an existing activity in areas which have become SNA's.

3.13 General rules applying outside SNA's:

- I support the intention of recognising areas around SNA's as important for protecting SNA's themselves and their values.
- I seek amendments to 3.13 to ensure that existing activities as outlined under 3.12 are provided for. I am concerned that 3.13 as proposed may result in areas of my farm around my SNA's being 'locked up' from pastoral based farming activities. This could

result in significant areas of my farm being impacted which ultimately would significantly impact my farm viability and resilience.

- I seek that 3.13 is amended to prioritise non regulatory, partnership, and landowner led approaches to managing areas around SNA's in order to protect the attributes that make a SNA significant. I seek that clause (2) is deleted.
- I seek that 3.13 is amended to prioritise engagement with the technical expert and landowner to co design management frameworks for the farm which ensures that indigenous biodiversity is provided for as an inherent and integral part of the farming business. These plans can be provided for through tailored Farm Plans bespoke to the biodiversity values and the farming business.

3.15 Highly Mobile Fauna:

- Support with amendments.
- I support the intention to recognise and provide for highly mobile fauna through non regulatory/ partnership-based frameworks generally, and where required regulatory approaches in relation to new subdivision, and development.
- I oppose provisions which seek to mandate this protection through regulatory frameworks where this may impact on existing activities and land uses. Enduring and effecting conservation approaches to protect these species are best achieved through working with landowners, and in particular the role of the expert in working with landowners to build understanding of these species, their values, and any management which is required for these populations to be healthy and resilient.
- I seek that 3.15 is amended to prioritise non regulatory, partnership, and landowner led approaches to managing mobile species and their habitat and lifecycle requirements.
- I seek that 3.15 is amended to prioritise engagement with the technical expert and landowner to co design management frameworks for the farm which ensures that mobile species is provided for as an inherent and integral part of the farming business. These plans can be provided for through tailored Farm Plans bespoke to the biodiversity values and the farming business.

Other comments on the proposed National Policy Statement for Indigenous Biodiversity:

I support 3.4 (a) that recognising the interactions of Ki uta ki Tai. This needs to be shared across all landscapes and values. To restore the corridors will need reversing of development in the name of economic development. The cost of maintaining what is left , needs to be shared by the resources of all.

The draining of the land of its water, removal of fauna and the development of mono cultured landscapes have directly had effect on, the mana and hauora of places.

Water ways and removed water ways is a great place to start to restored the diverse landscapes of New Zealand . This will enable the biodiversity to adjust with climate change.

The environments that have been shaped around human's values and judgements **have been egoistic, destructive and short sighted**
