I have given four years of my life on th Whangarei Harbour Catchment group helping and contributing to improve th National Policy Statement.

What is the point of working for 4 years to contribute to a document that hopefully will make New Zealand cleaner and greener

When Central Government destroys everything we've worked for by caving into the agricultural sector.

The only way to go forward is to look at the holistic picture not just one sector, agricultural New Zealand is wasteful, inefficient, selfish and polluting.

Cure tbe Cause & not the Effect
