Objectives for the contribution

Do you agree with these objectives for our contribution? No

1b. What is most important to you? Most important to get the debate back onto accurate science and not religion

What would be a fair contribution for New Zealand?

2. What do you think the nature of New Zealand's emissions and economy means for the level of target that we set?

I think that because the whole topic is based on fallacy that this and all other questions are meaningless

How will our contribution affect New Zealanders?

3. What level of cost is appropriate for New Zealand to reduce it's greenhouse gas emissions? For example, what would be a reasonable reduction in annual household consumption? refer answer 2

4. Of the opportunities for New Zealand to reduce its emissions (as outlined on page 15 of the discussion document), which do you think are the most likely to occur, or be most important for New Zealand? reducing emissions can be important for reasons other than those pushed by the global warming /world control alarmists

Summary

5. How should New Zealand take into account the future uncertainties of technologies and costs when setting its target? refer answer 2

Other comments

6. Is there any further information you wish the Government to consider? Please explain.
Yes. Get back to scientific basics. Dont dabble in theology. The climate of the world changes. It always has and always will. Work around that fact. By all means work towards conservation and prudent use of natural resources, and look at the development of new technologies,these are good things to do in themselves,but dont do it on the basis of a hair brained global scam.
You have been warned, get your head out of the sand.
