Dear Sir,

**Climate Change Consultation Consultation**

Ready or not, coming; we are set for 4<sup>0</sup>C warming, not 2<sup>0</sup>C, and with likelihood of a 10<sup>0</sup>C jump and Permian style extinction; game over by 2040.

*New Zealand's Climate Change Target* page 11 shows an EU matching target of 10-20% above 1990 greenhouse gas emission levels; elsewhere less or more.

Our towns mutate like moulds and throw out thickening strands. Earth runs a fever. A \$3B defence budget might meet a climate threat, but now with the highest heavens we are at war. How can we beat their heat with strangled talk of less or more?

Yours faithfully,

Mark and Katrin Collet
