

Your submission to Zero Carbon Bill

Reference no: 147

Submitter Type: Individual

Clause

1. What process should the Government use to set a new emissions reduction target in legislation?

Notes

The Government should stop this nonsense

Clause

2. If the Government sets a 2050 target now, which is the best target for New Zealand?

Notes

this is just mindless. Carbon Dioxide is a vital trace gas and we need more of it

Clause

3. How should New Zealand meet its targets?

Notes

NZ should stop pretending that this is about the climate, but rather the marxist redistribution of wealth through the impoverishment of new zealanders.

Clause

4. Should the Zero Carbon Bill allow the 2050 target to be revised if circumstances change?

Notes

there should be no such bill

Clause

5. The Government proposes that three emissions budgets of five years each (i.e. covering the next 15 years) be in place at any given time. Do you agree with this proposal?

Position

No

Notes

Carbon Dioxide is not a problem

Clause

6. Should the Government be able to alter the last emissions budget (i.e. furthest into the future)?

Notes

Carbon Dioxide is not a problem. There should be no emissions budget at all

Clause

7. Should the Government have the ability to review and adjust the second emissions budget within a specific range under exceptional circumstances? See p36 Our Climate Your Say

Notes

Carbon Dioxide is not a problem. There should be no emissions budget at all

Clause

8. Do you agree with the considerations we propose that the Government and the Climate Change Commission take into account when advising on and setting budgets? See p44 Our Climate Your Say

Position

No

Notes

Carbon Dioxide is not a problem. There should be no emissions budget at all. IPCC models have consistently failed to predict reality, to the extent that temperature and sea level data is now routinely altered to fit the model. Carbon Dioxide is not a problem. There should be no emissions budget at all

Clause

9. Should the Zero Carbon Bill require Governments to set out plans within a certain timeframe to achieve the emissions budgets?

Notes

Carbon Dioxide is not a problem. There should be no emissions budget at all. IPCC models have consistently failed to predict reality, to the extent that temperature and sea level data is now routinely altered to fit the model. Carbon Dioxide is not a problem. There should be no emissions budget at all

Clause

10. What are the most important issues for the Government to consider in setting plans to meet budgets? For example, who do we need to work with, what else needs to be considered?

Notes

The government should stop this marxist wealth distribution farce.

Clause

11. The Government has proposed that the Climate Change Commission advises on and monitors New Zealand's progress towards its goals. Do you agree with these functions? See p42 Our Climate Your Say

Position

No

Notes

climate change is independent of human activity, and AGW is a scam

Clause

12. What role do you think the Climate Change Commission should have in relation to the New Zealand Emissions Trading Scheme (NZ ETS)?

Notes

it should have no role, no position and should not exist

Clause

13. The Government has proposed that Climate Change Commissioners need to have a range of essential and desirable expertise. Do you agree with the proposed expertise? See p45 Our Climate Your Say

Position

No

Notes

The entire commission should be disbanded and everyone who supports AGW climate dishonest should be sent to jail.

Clause

14. Do you think the Zero Carbon Bill should cover adapting to climate change?

Notes

There should be no such bill

Clause

15. The Government has proposed a number of new functions to help us adapt to climate change. Do you agree with the proposed functions? See p47 Our Climate Your Say

Position

No

Notes

The Government should drop the pretence that this is about climate

Clause

16. Should we explore setting up a targeted adaptation reporting power that could see some organisations share information on their exposure to climate change risks?

Notes

The nonsense and bureaucracy around this is unjustifiable and everyone involved need to go to jail.

Clause

Do you have any other comments you'd like to make?

Notes

Humans have no effect on the climate. CO2 plays no role in warming the planet. IPCC models have failed, and continue to fail, because they attempt to shoehorn a vital trace gas into a role in which it plays no part. The arctic has not melted, winters have not stopped and they never will. The sun is the primary driver of earth's climate, with modifications by cosmic rays, which modify both solar activity and volcanic activity. The current warming from the last glacial period has come to an end, and from here on in it is going to get colder. To destroy our economy and energy wealth to attempt to take control of something by limiting a vital trace gas is

criminal.
