**A climate law like the Zero Carbon Act is important because...**

Intelligent people respond to knowledge from science therefore I support reducing carbon production in all ways. I am enjoying limiting my car use and my future electric car should be on a share basis. I have not been on an aeroplane in three years, leisure here is fun. I look forward to more electric trains and small electric buses.

**Long-term target**

I support the most ambitious target of reducing total greenhouse gases to net zero by 2050. I also support taking a science-based approach to ensure our efforts to reduce emissions are as impactful as possible: we should aim for negative levels of long-lived gases, while reducing short-lived gases to sustainable levels. This target should be reached by reducing our own emissions and not by using international carbon credits.

**Climate Commission**

I support the establishment of an independent Climate Commission that is made up of experts and provides advice, but does not make final decisions.

**Adaptation**

I support a plan for adaptation being included in the Zero Carbon Act.

**Climate justice**

A Zero Carbon Act must be just and fair in that it honours Te Tiriti o Waitangi; ensures a just transition for workers and communities; and avoids passing on the costs to future generations.

**Further comments**

The key to success is to motivate and involve all of us. [Listen to young people] The challenge of change can be enjoyable.
