

Your submission to Zero Carbon Bill

Mrs. (Judith Bartosh)

Reference no: 1671

Submitter Type: Individual

Clause

1. What process should the Government use to set a new emissions reduction target in legislation?

Notes

There should not be budgets. Carbon dioxide is not a pollutant

Clause

4. Should the Zero Carbon Bill allow the 2050 target to be revised if circumstances change?

Notes

There should NOT be a zero carbon bill.

Clause

8. Do you agree with the considerations we propose that the Government and the Climate Change Commission take into account when advising on and setting budgets? See p44 Our Climate Your Say

Position

No

Notes

Clause

10. What are the most important issues for the Government to consider in setting plans to meet budgets? For example, who do we need to work with, what else needs to be considered?

Notes

Scientists who understand the "real science". How is the earth affected by sun spots? What is the role of the oceans in climate change? What is the role of volcanic activity on land and under the ocean on climate change? How do we accurately measure worldwide temperature? None of these things are taken into account by the mathematical models used to predict climate change. This is why they are so inaccurate. Al Gore's Hockey stick is a good example. There was no warming from 2000-2014 but carbon dioxide levels continued to increase. Why?. We need good science before we spend billions of dollars.

Clause

13. The Government has proposed that Climate Change Commissioners need to have a range of essential and desirable expertise. Do you agree with the proposed expertise? See p45 Our Climate Your Say

Notes

This is a waste of money until we understand the science and find out why and how the earth is warming.

Clause

14. Do you think the Zero Carbon Bill should cover adapting to climate change?

Position

Yes

Notes

There should be no Zero carbon bill but we need to adapt to the inevitable climate change

Clause

15. The Government has proposed a number of new functions to help us adapt to climate change. Do you agree with the proposed functions? See p47 Our Climate Your Say

Position

Yes

Notes

Clause

16. Should we explore setting up a targeted adaptation reporting power that could see some organisations share information on their exposure to climate change risks?

Position

Yes

Notes**Clause**

Do you have any other comments you'd like to make?

Notes

This document presupposes that man made Carbon dioxide emissions are the major cause of global warming. Science does not support this. Action required. Review the "real science" (not mathematical models based on very limited data and are continually proven wrong by new data) which seems to indicate carbon dioxide levels increase after global warming, not cause it. Have a plan for NZ to adapt to climate change, address pollution in the form of carbon particles and other gases in the air, swimmable rivers, clean harbours, plastics recycling, making NZ organic. Carbon dioxide is a colourless odourless gas we all breathe out, not a pollutant. New Zealand should be leading the world in questioning the science.
