

Your submission to Zero Carbon Bill

Karren Margaret Beanland

Reference no: 7971

Submitter Type: Individual

Clause

1. What process should the Government use to set a new emissions reduction target in legislation?

Position

The Government sets a 2050 target in legislation now

Notes

Clause

2. If the Government sets a 2050 target now, which is the best target for New Zealand?

Position

Net Zero Long-Lived Gases and Stabilised Short-Lived Gases - Long-lived gases to net zero by 2050 while also stabilising short-lived gases

Notes

I think the initial focus should be on CO2 because these emissions can be address through transport changes and energy efficiency, which will have long-term benefits for the economy. It would be a good goal to stabilize short-lived gases such as methane, but we need to recognise that this may be harder to achieve. Also, shorter-lived gases are associated with the agricultural sector, which is producing food. That sector should be encouraged to import but it could be done over a longer timeframe. We should tackled the easier areas first, which is CO2.

Clause

3. How should New Zealand meet its targets?

Position

Domestic emissions reductions (including from new forest planting) and using some emissions reductions from overseas (international carbon units) that have strong environmental safeguards

Notes

The emphasis has to be on schemes that have strong environmental and economic safeguards.

Clause

4. Should the Zero Carbon Bill allow the 2050 target to be revised if circumstances change?

Position

Yes

Notes

Clause

5. The Government proposes that three emissions budgets of five years each (i.e. covering the next 15 years) be in place at any given time. Do you agree with this proposal?

Position

Yes

Notes

Clause

6. Should the Government be able to alter the last emissions budget (i.e. furthest into the future)?

Position

Yes - the third emissions budget should be able to be changed but only when the subsequent budget is set

Notes

Clause

7. Should the Government have the ability to review and adjust the second emissions budget within a specific range under exceptional circumstances? See p36 Our Climate Your Say

Position

Yes

Notes

Clause

8. Do you agree with the considerations we propose that the Government and the Climate Change Commission take into account when advising on and setting budgets? See p44 Our Climate Your Say

Position

Yes

Notes

Add Treaty of Waitangi implications

Clause

9. Should the Zero Carbon Bill require Governments to set out plans within a certain timeframe to achieve the emissions budgets?

Position

Yes

Notes**Clause**

10. What are the most important issues for the Government to consider in setting plans to meet budgets? For example, who do we need to work with, what else needs to be considered?

Notes

The focus should be on energy efficient transport policies and energy efficiency - use of solar, wind technologies, energy efficiency in the building sector (housing, electricity supply regulations to support the use of solar panels on houses by selling back to the grid), support for use of electric vehicles even it is expensive while the country is building up the EV fleet, promotion of public transport and alternative forms of transport such as walking and cycling (eg: make it free for school age children and students to use public transport)

Clause

11. The Government has proposed that the Climate Change Commission advises on and monitors New Zealand's progress towards its goals. Do you agree with these functions? See p42 Our Climate Your Say

Position

Yes

Notes**Clause**

12. What role do you think the Climate Change Commission should have in relation to the New Zealand Emissions Trading Scheme (NZ ETS)?

Position

Makes decisions itself in respect of the number of units available in the NZ ETS

Notes

Governments should not be able to subvert the ETS by having a low carbon price as we have seen in recent years.

Clause

13. The Government has proposed that Climate Change Commissioners need to have a range of essential and desirable expertise. Do you agree with the proposed expertise? See p45 Our Climate Your Say

Position

Yes

Notes**Clause**

14. Do you think the Zero Carbon Bill should cover adapting to climate change?

Position

No

Notes

I really want to see a focus on CO2 reductions through energy efficiency and better transport options. Adaptation - and the costs of adaptation - need to be handled very carefully. This area requires careful consideration and I would not want to see this become the focus of the bill.

Clause

15. The Government has proposed a number of new functions to help us adapt to climate change. Do you agree with the proposed functions? See p47 Our Climate Your Say

Position

Yes

Notes

Clause

16. Should we explore setting up a targeted adaptation reporting power that could see some organisations share information on their exposure to climate change risks?

Position

Yes

Notes
