

Your submission to Zero Carbon Bill

Tim Marshall

Reference no: 9322

Submitter Type: Individual

Clause

1. What process should the Government use to set a new emissions reduction target in legislation?

Position

The Government sets a 2050 target in legislation now

Notes

Clause

2. If the Government sets a 2050 target now, which is the best target for New Zealand?

Position

Net Zero Emissions - Net zero emissions across all greenhouse gases by 2050

Notes

It is essential to differentiate long-lived and short-lived gases (a two basket approach) in developing policies and strategies for implementation. In addition, distinguish between fossil methane and biological methane in policies.

Clause

3. How should New Zealand meet its targets?

Position

Domestic emissions reductions only (including from new forest planting)

Notes

Clause

4. Should the Zero Carbon Bill allow the 2050 target to be revised if circumstances change?

Position

No

Notes

Emissions targets could be brought forward if there is new scientific evidence of what is required for a safe climate.

Clause

5. The Government proposes that three emissions budgets of five years each (i.e. covering the next 15 years) be in place at any given time. Do you agree with this proposal?

Position

Yes

Notes

Clause

6. Should the Government be able to alter the last emissions budget (i.e. furthest into the future)?

Position

Yes - the third emissions budget should be able to be changed but only when the subsequent budget is set

Notes

Clause

7. Should the Government have the ability to review and adjust the second emissions budget within a specific range under exceptional circumstances? See p36 Our Climate Your Say

Position

Yes

Notes

But only to increase the speed of emissions reductions.

Clause

8. Do you agree with the considerations we propose that the Government and the Climate Change Commission take into account when advising on and setting budgets? See p44 Our Climate Your Say

Position

Yes

Notes

Together with the following: to reduce cumulative emissions sufficiently to avoid dangerous climate change, the steepest emissions cuts to carbon dioxide must occur in the first 10 years, with possibly less steep cuts thereafter.

Clause

9. Should the Zero Carbon Bill require Governments to set out plans within a certain timeframe to achieve the emissions budgets?

Position

Yes

Notes**Clause**

10. What are the most important issues for the Government to consider in setting plans to meet budgets? For example, who do we need to work with, what else needs to be considered?

Notes

An important consideration is how New Zealand can turn challenge into opportunity by transforming to low carbon economy and society. Need to flip our thinking about cost - this is not a cost but a necessary investment for the future of people and the planet. Government will need to work with all New Zealand stakeholders who may contribute, demur or be disadvantaged including businesses individually and collectively (eg Business NZ, EMA, Chambers of Commerce, Sustainable Business Network, Sustainable Business Council), local government + low income groups and beneficiaries. Government also needs to invest in science and collaboration with the international science community. Our Zero Carbon initiatives should not be subject to trade agreements. New Zealanders will be energised and inspired if our Government is very progressive on this, engaging with others around the world who are doing the same and, who knows, maybe even leading the way on some fronts.

Clause

11. The Government has proposed that the Climate Change Commission advises on and monitors New Zealand's progress towards its goals. Do you agree with these functions? See p42 Our Climate Your Say

Position

Yes

Notes

Reporting on progress is vital to having Kiwis energised and involved.

Clause

12. What role do you think the Climate Change Commission should have in relation to the New Zealand Emissions Trading Scheme (NZ ETS)?

Position

Advising the Government on policy settings in the NZ ETS

Notes**Clause**

13. The Government has proposed that Climate Change Commissioners need to have a range of essential and desirable expertise. Do you agree with the proposed expertise? See p45 Our Climate Your Say

Position

Yes

Notes**Clause**

14. Do you think the Zero Carbon Bill should cover adapting to climate change?

Position

Yes

Notes**Clause**

15. The Government has proposed a number of new functions to help us adapt to climate change. Do you agree with the proposed functions? See p47 Our Climate Your Say

Position

Yes

Notes**Clause**

16. Should we explore setting up a targeted adaptation reporting power that could see some organisations share information on their exposure to climate change risks?

Position

Yes

Notes
