A Zero Carbon Act is important to me because...

Climate change is already in motion and that scares me. It scares me because we can already easily see the damage that is being done to the landscapes of our pacific and antarctic neighbours. It is unjust to sit beside communities of people who are forced away from their land, their way of living obliterated or unstable through changing weather patterns. This issue will only get worse and more complex the longer that we wait, who will have the responsibility and the means to accept these climate refugees once their homes are completely gone. As a pacific nation our ties with the land, the sea and the taonga from within both should be strong, however the structure of our lives has made it too easy to turn a blind eye to our damage. We believe that it is acceptable to live in an unsustainable fashion because it is more efficient, often appears cheaper and easier. However even those who refuse to be a passive consumer in a wasteful and environmentally harmful society can only make a minute difference. Individuals can take so much responsibility for the changing climate, we can take our reusable bags, we can buy sustainable clothing, we can volunteer our time to welcome former refugees who have had no choice but to abandon their homeland, however our actions are not enough. That is what frightens me, I can encourage those around me to make the small changes, but without a definite and accountable stand against climate change and commitment to plans that allow a reasonable and fast transition I feel powerless. I place my trust and hope in you, to value the voices of the people you represent.

Q2. If the Government sets a 2050 target now, which is the best target for New Zealand? The most ambitious target: reducing total greenhouse gases to net zero by 2050. I also support taking a science-based approach to ensure our efforts to reduce emissions are as impactful as possible: we should aim for negative levels of long-lived gases, while reducing short-lived gases to sustainable levels.

Q3. How should New Zealand meet its targets? By using domestic emissions reductions only (including from new forest planting).

Q4. Should the Zero Carbon Bill allow the 2050 target to be revised if circumstances change? The 2050 target should not be altered in response to “economic changes” as this undermines its long-term certainty. However, the ability to revise the 2050 target in light of major changes in scientific understanding or international agreements should be permitted.

Q5. The Government proposes that three emissions budgets of five years each (i.e. covering the next 15 years) be in place at any given time. Do you agree with this proposal? Yes - I agree with 5-year budgets set 10-15 years in advance, so that 3 are in effect at all times.

Q6 - Q7. Should the Government be able to alter emissions budgets? No - emissions budgets should not be altered in response to “economic changes” as this undermines their long-term certainty. However, the ability to revise budgets in light of major changes in scientific understanding or international agreements should be permitted.
| Q8. Do you agree with the proposed considerations that the Government and the Climate Commission will need to take into account when advising on and setting budgets? | I agree that the Government and the Climate Commission should take the following factors into consideration when advising on and setting budgets:  
• scientific knowledge regarding climate change  
• technology relevant to climate change  
• economic circumstances and the likely impact of a decision on the economy, as well as the competitiveness of particular sectors of the economy  
• fiscal circumstances and the likely impact of the decision on taxation, public spending and public borrowing  
• social circumstances and the likely impact of a decision on fuel poverty  
• energy policy and the likely impact of a decision on energy supplies and the carbon and energy intensity of the economy. |

<tbody>
<tr>
<td>Q9. Should the Zero Carbon Bill require Governments to set out plans within a certain timeframe to achieve the emissions budgets?</td>
<td>Yes - we must learn from the mistakes of the UK’s Climate Change Act and specify a strict time frame for producing a plan.</td>
</tr>
<tr>
<td>Q10. What are the most important issues for the Government to consider in setting plans to meet budgets? For example, who do we need to work with, what else needs to be considered?</td>
<td>The Government’s policy plans to meet emission budgets should be comprehensive, fair, cost-effective, environmentally sustainable, and reflect a commitment to Te Tiriti o Waitangi.</td>
</tr>
<tr>
<td>Q11. The Government has proposed that the Climate Change Commission advises on and monitors New Zealand’s progress towards its goals. Do you agree with these functions?</td>
<td>Yes - the Commission should not be a decision-making body. However, the Government should be legally required to consider and formally respond to the Commission’s advice, and to provide an explanation if they do not act on it.</td>
</tr>
<tr>
<td>Q12. What role do you think the Climate Change Commission should have in relation to the New Zealand Emissions Trading Scheme (NZ ETS)?</td>
<td>The Commission should advise the Government on policy settings in the NZ ETS. It should not make decisions itself with respect to the number of units available in the NZ ETS, or its implementation.</td>
</tr>
</tbody>
</table>
| Q13. The Government has proposed that Climate Change Commissioners need to have a range of essential and desirable expertise. Do you agree with the proposed expertise? | I agree with the following collective expertise:  
• climate change policy (including emissions trading)  
• resource economics and impacts (including social impacts, labour markets and distribution)  
• te Tiriti o Waitangi, te reo me ona tikanga Māori and Māori interests  
• climate and environmental science including mātauranga Māori  
• experience with addressing adaptation challenges like planning, insurance and local government  
• risk management  
• engineering and/or infrastructure  
• community engagement and communications.  
• business competitiveness  
• knowledge of the public and private innovation and technology development system.  
I think expertise in public health is also important. |
| Q14. Do you think the Zero Carbon Bill should cover adapting to climate change? | Yes. This may require a separate adaptation sub-committee within the Climate Commission. |
| Q15. The Government has proposed a number of new functions to help us adapt to climate change. Do you agree with the proposed functions? | I agree with the proposed functions below, but recognise that nuance is required in terms of how local councils are involved:  
• a national climate change risk assessment  
• a national adaptation plan  
• regular review of progress towards implementing the national adaptation plan  
• an adaptation reporting power |
<table>
<thead>
<tr>
<th>Q16. Should the Government explore setting up a targeted adaptation reporting power that could see some organisations share information on their exposure to climate change risks?</th>
<th>Yes</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Further comments</strong></td>
<td>New Zealand has always been pioneers in terms of making bold and strong claims against things that are deeply valued, women’s suffrage, same sex marriage, de-criminalisation of sex workers, nuclear free. This latest claim must be for the environment.</td>
