

Your submission to Zero Carbon Bill

John Davey, **John Davey**

Reference no: 10714

Submitter Type: Individual

Clause

1. What process should the Government use to set a new emissions reduction target in legislation?

Notes

No target set. The climate change is natural , the real issue is the waste and pollution caused by excessive use of plastics, chemicals and throw away appliances. The sea has become the worlds sewer.

Clause

3. How should New Zealand meet its targets?

Notes

I am all for planting more trees, but a monoculture of pines is not biodiversity, also any pests that arrive could wipe out much of the timber industry relying on one tree species.

Clause

Do you have any other comments you'd like to make?

Notes

Firstly I see the submission form has no place for those opposing this scam. The climate change you are talking about here is fraudulent and should be treated as such. The government should be stopping this instead of ripping off its employers. Only a few fat cats on the other side of the world are going to benefit from this.
