

# Your submission to Zero Carbon Bill

(Kathleen Christie)

**Reference no:** 11323

**Submitter Type:** Individual

**Clause**

1. What process should the Government use to set a new emissions reduction target in legislation?

**Notes**

Global warming (now known as climate change) was set up as a false front to implement global governance and impose how we will all live. The plan was set up by Maurice Strong as Agenda 21 in Rio Janeiro in 1992. It started back in the early development of the Club of Rome. It is funded by a UN umbrella group called ICLEI - Local government for sustainability. We thought we paid local government for basic amenities and services we need - trash disposal, street lighting, road maintenance etc not to solve Third world problems. Third world poverty = sexual inequality - climate change - overpopulation - chiefly to redistribute income. Michael Reddell in his paper says - I would be surprised if ever before in history a democratic government has consulted on proposals to reduce the material wellbeing of its own people by up to 25 per cent. Zero emissions carbon dioxide. Are you mad? It is a plant food. Without it there is no life on earth. Animals and man cannot exist without food. You breathe out carbon dioxide with every breath you take. As with nuclear New Zealand could lead the world to say this is rubbish it has got to stop.
