

I Peter James Hargest record my submission to the Carbon Zero submission process and request to be heard in the hearing process.

Name : Peter James Hargest

SUBMISSION

I am very concerned that the natural occurrence of evaporation, that has existed since documented time , has been completely ignored by scientific establishments worldwide in reaching their consensus that CO2 is responsible for Climate Change .

The natural occurrence of evaporation is so huge that it dwarfs any computer modeling of anthropogenic CO2 emissions and brings the whole Climate Change saga into a costly and wasteful hoax .

Only when officials include natural evaporation into the Climate Change discussion will there be creditable consultation and analysis.

New Zealand, as a small island has a massive surrounding ocean and territorial boundary that ranges from tropical climate to Antarctic weather conditions and as a nation is virtually blameless in any accusation of unreasonable misuse of gaseous emissions.

There is ample evidence that solar activity is significant in climate variation through time.

Further, the whole climate change industry has been demonstrated to be rife with tampering, meddling, changing, adjusting, hiding or just plain cooking of “evidence” and, together with the vested conflicts of interest of climate change industry scientists, one should be very wary of accepting or believing any so-called “evidence”. More so, when large numbers of eminent scientists have a very different counter point of view. It is disgusting that the climate change proponents dismiss any serious objections as those of “sceptics”. One should not attempt to change a whole country and affect its population with such contentious dodgy “evidence”, largely based on ideology and opinion. This is my home and my life too.

The proposed actions of this legislation will have serious implications to the ability to create and maintain the momentum and effort that underpins our standard of living. Just because it is the collective idea of a group of young radicals, it doesn't follow or mean that it is a good idea, or will work.

Therefore I record a submission AGAINST the Carbon Zero policy of Hon James Shaw of the Green Party.

Sincerely

**Peter Hargest
