17 August 2018 1:14 p.m. To: Wastefree Subject: Submission on the proposed mandatory phase out of single-use plastic shopping bags Dear Hon. Eugenie Sage, I support a mandatory phase-out on the sale and distribution of all single-use plastic bags. The phase-out must include a ban on false solutions, such as degradable (eg, oxo degradable, biodegradable and compostable) plastic. It must also include heavier weight singlet bags, lightweight boutique bags, and so called "emergency bags" of any thickness (microns). There should be no exemptions from a mandatory phase out of single use bags. The phase-out should be applied across all retailers, no matter the size and staff level of the business. This is the fairest and most comprehensive way to ensure the elimination of single use plastic bags from the waste stream. The phase-out should take effect as soon as possible (2-6 months). I agree that the benefits from implementing a mandatory phase out of single-use plastic shopping bags exceed the costs from implementing the phase out. There is no monetary value we can place the health of our oceans, rivers and waterways and the natural services they provide humans and other species. Reasonably practicable alternatives to single-use plastic shopping bags already exist in New Zealand, such as reusable cloth bags which are already available in many retail stores. A phase-out of single-use plastic bags should be the first step in addressing plastic pollution. I also support the call by Greenpeace and others for a national strategy to tackle the global scourge of plastic pollution. We must work to remove all plastic from the environment and come up with reliable and effective means of recycling. One key initiative that is needed is the introduction of a tax system that rewards businesses that invest in removing plastic from their business. This should also apply to businesses that dramatically reduce their carbon footprint. Businesses that produce plastics and high carbon emissions should be taxed more heavily. Also the introduction of a deposit scheme for plastics and glass to incentivise people to recycle. It's about time we became world leaders in the fight against climate change. Yours sincerely, Simon Werry
