Objectives for the contribution

Do you agree with these objectives for our contribution? No

1b. What is most important to you? This is political talk for doing nothing but talk.

What would be a fair contribution for New Zealand?

2. What do you think the nature of New Zealand's emissions and economy means for the level of target that we set?

How will our contribution affect New Zealanders?

3. What level of cost is appropriate for New Zealand to reduce its greenhouse gas emissions? For example, what would be a reasonable reduction in annual household consumption?

4. Of the opportunities for New Zealand to reduce its emissions (as outlined on page 15 of the discussion document), which do you think are the most likely to occur, or be most important for New Zealand?

Summary

5. How should New Zealand take into account the future uncertainties of technologies and costs when setting its target? Be proactive and ambitious.

Other comments

6. Is there any further information you wish the Government to consider? Please explain.
The world I want to live in and for future generations is one with an unpolluted healthy environment and people, and rich biodiversity.

NZ should embrace and live up to its aspirations to be a leader in promoting a healthy environment - including energy efficiency, switching to non-polluting energies, stop polluting rivers and lakes, and conservation of species and biodiversity.
