1. The purpose of this paper

The globe is not warming, contrary to widespread belief. Furthermore, increased carbon dioxide (CO₂) emitted from mankind's activities is not contributing to or causing calamitous climatic events. Man-made, or 'Anthropogenic' global warming (AGW) is simply not occurring.

Global warming is a scam and a hoax. It is being used to generate fear and panic. Those behind the movement use it to control people's beliefs and for financial gain.

An uninformed and unquestioning mass of the world's population has fallen victim to significant propaganda, causing widespread misconception. Global warming and climatic change campaigners, largely the United Nations' Independent Panel for Climate Change (IPCC), have mounted one of the most well funded, massive propaganda campaigns in history – and with a compliant media on their side.

However, in informed countries, there is a ground swell of global warming refute and surging numbers of climate realists. In the USA, the lies of Al Gore, who netted hundreds of millions of dollars advocating global warming, have been revealed, and the Gallup Poll, a widely recognised barometer of American opinion, shows environmental concerns about global warming are now as low as they were 25 years ago.

This paper collates information to show how the current levels of local widespread belief have come about, and provides clear evidence that the existing political agendas in New Zealand and elsewhere should cease.

2. Facts – how much the globe has really ‘warmed’ in the last 25 years

Global warming is not happening to any greater extent than it has for hundreds of years and has not occurred at all in the last 18 years.

Remote Sensing Systems (RSS) is a world leader in processing and analysing microwave data collected by satellite microwave sensors. The RSS mission is to provide research-quality geophysical data to the global scientific community.

The RSS graph below dated November 2014 charts global mean temperature change. It clearly shows the consistency of the last 18+ years. It is now 18 years and 7 months of no global warming.

3. Carbon dioxide

CO₂ is a colorless, odorless, naturally occurring gas. It is the basis of most forms of life on the planet as it is necessary for photosynthesis, which creates plants, which in turn nourish animals. It is currently naturally in the earth's atmosphere as 0.04 % of 'air' – 400 parts per million (ppm). CO₂ has increased from 350ppm to 400ppm over the last ~50 years, but this is inconsequential given it has been as high as 7000ppm of the earth's air in the past.

Importantly, CO₂ is produced by the decomposition of plant matter, and released from the oceans and other natural processes including volcanoes. A minor amount is produced by man – man-made CO₂ emissions are about ~4% of all sources of CO₂ going into the atmosphere (please see Appendix B). **So 96% of all CO₂ is naturally produced.**

Historically and for millions of years CO₂ levels have been over 3000ppm on this planet and sometimes around 7000ppm. Ice ages occurred during these times, as did normal temperatures. The much higher levels of CO₂ had no correlation to the planet's temperature – life kept evolving normally. According to IPCC, the more recent increase in CO₂ in the atmosphere (of just ~50ppm) will dramatically warm the planet with catastrophic climatic implications. The IPCC claims that most of the warming is caused by increases in CO₂ from burning of fossil fuels. Therefore, CO₂ emissions must be reduced – and at huge cost. This is flawed thinking.

Increasing CO₂ by just 50ppm, or even doubling it, would not make any significant difference to anything on this planet, other than making plants grow faster. Dr Patrick Moore, Cofounder of Greenpeace, who is now a global warming realist says (2013) *“the optimal level of CO₂ for plant growth is 1600 ppm, four times higher than the level today.”* 400ppm is a starvation diet for plants and they die under 150ppm. Moore (2014) also says *“This is why greenhouse growers purposely inject the CO₂-rich exhaust from their gas and wood-fired heaters into the greenhouse, resulting in a 40-80 per cent increase in growth. The idea that it would be catastrophic if CO₂ were to increase... is preposterous.”*

Historical graphs of CO₂ : Temperature (Berner & Kothavala, 2001) show:

DATE	INITIAL CO ₂ LEVEL	CHANGE IN CO ₂ LEVEL	TEMPERATURE CHANGE
480m years ago	7000 ppm	-3000 ppm – to 4000 ppm	No change at 22 deg C
450m years ago	4000 ppm	+500 ppm – to 4500 ppm	22 deg C to 12 deg C

Furthermore, it is not conclusive that increased CO₂ in the atmosphere is caused by man – it is more likely caused by other natural factors.

Atmospheric scientist Murray Salby (2011) says of increasing atmospheric CO₂ that *“It is ten times as likely that atmospheric CO₂ is coming from natural sources, namely the warming ocean surface, as it is likely that it is coming from anthropogenic (man-made) sources. The changes in CO₂ track ocean surface temperature, not global carbon emissions. Burning fossil fuels is not increasing atmospheric CO₂. Recovery from the Little Ice Age, driven by the sun, is causing the oceans to release CO₂. It is*

temperature driving CO2 release, not the other way around. Just as it has always been.” Salby has since been dismissed from Sydney University, for making these statements.

There is no direct link between man-made fossil fuel emissions and global temperature on two counts. Firstly it is not agreed that increased CO2 is a consequence of man-made fossil fuel emissions and secondly, there is not agreement that CO2 warms the globe to any significant amount anyway.

Australia introduced a carbon tax to reduce CO2 emissions, which was repealed by the current Abbott government. This effort to reduce carbon emissions saw Australians pay a whopping \$24.47 billion to reduce global warming (theoretically) – by just 0.004% (Robson, 2013). The justification for the Carbon Tax was to reduce carbon emissions to stop global warming. Even if the world was warming up, the effects of the Carbon Tax were virtually nil. The New Zealand Emission Trading Scheme should be disbanded or the country will waste money similarly.

Reducing CO2 emissions requires huge cost. Currently the amount of money being spent globally, supposedly to reduce ‘man’s carbon footprint’, is in the trillions of dollars per year (Bell, 2015). Yet ridiculously, it has not been scientifically proven that increased CO2 in the atmosphere will cause either significant global warming or climatic disasters.

US Climatologist Dr Judith Curry, Professor and former Chair of the School of Earth and Atmospheric Sciences at the Georgia Institute of technology, (2015) says *“even if the USA is successful in meeting 80% reductions of CO2 emissions by 2050 this is going to reduce warming by one tenth of a degree centigrade. It is not going to do anything.”* Curry (2015) in her address to congress, states *“I am concerned that the proposed USA Intended Nationally Determined Contribution to the UN Framework Convention on Climate Change, to address the perceived problems of climate change will do essentially nothing to change the climate, and the USA and other nations will remain vulnerable to climate surprises and extreme weather events.”*

In summary, enormous sums of money have been used to reduce a gas which is 96% produced naturally by the planet itself, to supposedly reduce global warming and related climatic disasters. Mankind’s effort to control a non-problem with a non-solution is ridiculously nonsensical. A lack of questioning and understanding of the real science is widespread.

4. Climate change science – the inconvenient truth for IPCC

The IPCC is the primary proponent of dramatic global warming yet its argument is fundamentally flawed because of the way it selectively uses science and manipulates data to support its views. The particularly concerning areas include:

- the lack of consideration of views opposing its own (true science considers opposing views)
- the nature of IPCC's existence is a conflict of interest
- manipulation of data
- political funding biases

There is no question about climate change. It changes all the time and has done so naturally for centuries. This is not however, reflected in the IPCC's selective use of 'science'. It's manipulation of research, data and opinion has fuelled an extremely biased view that does not reflect the planet's actual climate.

True science is empirical and replicated – it constantly probes, doubts, investigates, examines, and welcomes dissent. Yet the IPCC did not invite one single person who did not agree with its pre-decided outcome for major reports to review or comment on them. IPCC has published five reports since 1990, the latest being No 5 in 2013. For this No 5 report, it was claimed that a 95% consensus – that global warming is both occurring and man-made – exists, in spite of overwhelming evidence of nil, or nominal natural, warming. Of 11,944 papers considered, only 41 of them actually claim global warming is caused by man-made CO₂ (that's an alarming or 0.3 of 1%). Those that disproved global warming were dismissed. Lord Christopher Monckton (2013) of the UK's Science and Public Policy Institute has released an exhaustive statistical research paper that concludes that scientific consensus affirming man-made global warming is just 0.3%, not the 97% claimed by the global warming whiners.

The IPCC is a conflicted institution pushing a mandate that lacks true scientific rigour. Moore (2013) says; *“by its constitution, the IPCC has a hopeless conflict of interest. Its mandate is to consider only the human causes of global warming, not the many natural causes changing the climate for billions of years. If the IPCC did not find humans were the cause of warming, there would be no need for the IPCC under its present mandate. To survive, it must find on the side of the apocalypse. The IPCC should either have its mandate expanded to include all causes of climate change, or it should be dismantled.*

For about 25 years, the IPCC's climate predictions have been far from accurate. In addition to not welcoming nor considering dissenting opinions, there has been an increasing and continuous legacy of evidence that data has been manipulated.

There are countless examples of data manipulation (please see Appendix C). The levels of deception stretch across all the data involved. In any developed country, to seek public funding by tampering with data would see the culprits jailed. As a comparison, consider an IPO prospectus seeking billions of dollars from the public without verifiable scientific information in it – let alone manipulated data.

As just one example, suspicious data records from Paraguay were found to have been changed from a downward temperature trend to an upward one (from a decline of 1 deg C to an increase of 1.5 deg C). Graphs shown). Not only for three initial weather stations investigated but subsequently for a number of other weather stations in the area. Worse still they then used these upward temperature records to apply to tracks of the globe where no records have been kept.

In relation to this, Christopher Booker Snr., (English journalist and author. In 1961, he was one of the founders of the magazine Private Eye, and has contributed to it since then. He has been a columnist for The Sunday Telegraph since 1990.) (2015) states:

“When future generations look back on the global-warming scare of the past 30 years, nothing will shock them more than the extent to which the official temperature records – on which the entire panic ultimately rested – were systematically ‘adjusted’ to show the earth as having warmed much more than the actual data justified. Two weeks ago, under the headline ‘How we are being tricked by flawed data on global warming’, I wrote about Paul Homewood, who, on his Notalotofpeopleknowthat blog, had checked the published temperature graphs for three weather stations in Paraguay against the temperatures that had originally been recorded. In each instance, the actual trend of 60 years of data had been dramatically reversed, so that a cooling trend was changed to one that showed a marked warming.”

A search of Climate Depot “Weather Stations” brings up 11 similar examples. The incidence of data manipulation is so rife that USA Republicans are now claiming they will investigate (climate related) data tampering by NASA.

Needless to say, numerous reputable commentators thwart the accuracy and relevance of the ‘science’ claimed by IPCC:

- IPCC reviewer, Dr Don Easterbrook, (Easterbrook D) on IPCC report No 5 says (2013) *“it isn’t science at all – it’s dogmatic, political propaganda – the IPCC report must be considered the grossest misrepresentation of data ever published”*
- Exposing IPCC computer models, forecasting experts Green and Armstrong (2014) state *“our audit of the procedure used to create IPCC scenarios found that they violated 72 of 89 relevant forecasting principles”*
- *“Premeditated murder of science”* is how Climatologist Dr Tim Ball (Ball T, 2013) describes the IPCC’s 95% certainty that CO₂ is causing serious global warming and climatic disasters
- Climate Depot’s Mark Morano (2010) states 1000 of the so-called convinced man-made global warming scientists were in fact then skeptics – and that was five years ago!
- Curry (2014) says; *“as temperatures have declined, the climate models have failed to predict this decline, and so the IPCC has gained confidence in (its predictions of) catastrophic warming. In other words the more they are wrong about nearly everything, the more confident IPCC officials have become that they are right about nearly everything”*

- Meteorologist John Colman (2015), who cofounded the USA weather channel, says that human activity leading to global warming is no longer scientifically valid; *“there has been no warming for 18 years”*

However those that dissent or disprove global warming find it difficult to have their view aired. Subsequently, even despite the significant lack of IPCC integrity, a large proportion of people and media continue to believe dramatic global warming is occurring. Many media editors are reluctant to publish skeptical views. The IPCC like to make it heresy to question their message – they ‘shoot the messengers’ and are embarking on a programme to personally discredit, and if possible have funding cut off for, any scientist disagreeing with their fabricated consensus. These are desperate measures.

It is important to note the IPCC gets hundreds of times more funding, from weak misguided government sources, than any climate realists. The direct costs excluding subsidies for alternative energy projects to the US government is calculated to be \$22 billion USD per annum (\$42,800 a minute), for scientists to do endless research on man-made global warming. Natural causes of global warming, far more significant than man-made effects on global temperature changes as previously noted, are not included. According to Forbes columnist Larry Bell (2015) the ripple effect of global warming initiatives actually costs Americans \$1.75 trillion every year – three times larger than the entire USA federal budget deficit.

There is a tangled web of political activity and bias at play distorting the real truth. Paul Driessen (2010), a senior policy advisor with the Committee For A Constructive Tomorrow says: *“The climate change scientist – government – environmental – industrial climate complex is well funded and powerful. But it is also arrogant and dishonest and its assertions are so far removed from reality that they can no longer survive scrutiny and challenge. The time has come to end its attempt to control our lives, livelihoods, liberties, living standards and life spans.”*

Local politicians are unable to provide true scientific verification that CO₂ can cause drastic global warming or severe climatic problems – because it is impossible for them to do so. They will refer to ‘consensus science,’ which as discussed above, is not at all credible. The political agenda is based on fabricated information that does not stand scrutiny. It is unbelievable that politicians do not demand unquestionable scientific evidence before imposing huge crippling taxes that do nothing but provide jobs for bureaucrats. Real consideration of the above points effectively shoots the IPCC to pieces.

5. What's really going on with climatic events

There is currently no global warming, and calamitous climatic events are not increasing and are often doing the opposite of predictions. While certain local and recent events are more top of mind, such as Australian bush fires and hurricanes in Vanuatu and Northern Queensland, these events are not occurring any more often than they have over recent centuries. It should also be considered that improvements in communication and news media delivery over the last 50 years has brought far away events seemingly closer.

A summary of what's really going on with climatic events around the world:

Ice – The IPCC claim Antarctica's ice is melting, when in fact there is record ice in Antarctica. Antarctica sea ice recently hit a 35-year record high (National Snow and Ice Data Centre) and in January 2015 is 44.6% more than the 1981-2010 average. Ice in the Arctic has also been increasing in recent years (Swart et al 2015).

Snow – Recently a world record 24hr snowfall of 100.8 inches in 18 hours occurred in Italy (www.weather.com; "Italy winter storm dumps impressive 24 hr snowfall"). The previous record was 75.8 inches in 24 hours. The USA has had hundreds of record low temperatures in the last few years (USA Today - 'Coldest Air In Decades', 2015).

Climate Depot's Mark Morano states (2013); *"Extreme weather is failing to follow 'global warming' predictions: Hurricanes, Tornadoes, Droughts, Floods, Wildfires, all see no trend or declining trends in the USA. Extreme weather is at or near historic lows."*

Hurricanes – In the USA, at there were 3,264 Days without a Major (Cat 3 +) Hurricane Strike – 'Nearly 9 years... The last being Wilma in October, 2005'

Tornadoes – The USA tornado count has plummeted to record low levels for three consecutive years.

Droughts – *New research confirms human CO2 is not causing a global drought increase - 'Droughts in the USA are more frequent and more intense during COLDER periods'* (Legates, 2014).

Floods – Professor Roger Pielke's paper titled 'Are US Floods Increasing? The Answer is Still No' (2011) shows flooding has not increased in the USA over records of 85 to 127 years (Hirsch & Ryberg, 2012). The world's ten deadliest floods all occurred before 1976. i.e before the so called high man-made CO2 in the atmosphere (Hirsch & Ryberg, 2012).

USA Heatwaves – *The frequency of 90 deg (Fahrenheit) days in the USA has plummeted with three of the five mildest summers occurring since 2004* – USA temperatures (before tampering) have been declining for 90 years

Wildfires – 2014 was the quietest fire season of the decade according to data from the National Interagency Fire Centre and USA forest fires are nearing historic lows.

Sea levels – Sea levels have not risen any faster than normal since levels have been recorded and actual sea levels are doing the opposite of IPCC model predictions. Globally, scientists with solid empirical-based backgrounds claim there are severe problems with many of the 2007 IPCC predictions. Namely, that many of the predictions are ‘flat-out false, based on the IPCC's political agenda, or wildly inflated by failed climate models’. Houston and Dean (2011) state that the IPCC prediction of dangerously high acceleration of sea level increases is likely both a combination of invalid climate models and desired political outcomes. They discovered that the actual tidal gauge measurements over the last 80 years show sea level increases are decelerating, not accelerating, and currently we can expect 100 - 200mm sea level rise over the next century. IPCC predictions have at times been in the meters.

Temperature – As demonstrated earlier, satellite data confirms that, as at the present, we have had 18 years 7 months of no warming. It is harder to tamper with satellite data ad it should be used to measure global warming.

With these examples in mind, it cannot be claimed that disastrous climatic events are caused by increased CO2 levels in the atmosphere and global warming. There has been no warming recently and there are no facts to support the concept of dramatic global warming.

6. The Real Agenda – Redistributing the world's wealth

The real agenda has been admitted by senior IPCC officials and it has nothing to do with climate. The UN wants to increase its power and wealth to have increasing control over people's lives. It is preplanned UN run socialism that is the end game. The climate issues are to frighten the populations of the world into committing huge funding to the UN. However, as this paper shows, CO2 causing run away global warming and climatic disasters is discredited.

It has, for decades, been the preplanned dramatic expansion of bureaucracy and totalitarianism enabling unelected officials in the UN, the EU, and in any independent state that can be conned into the scam, to control almost every aspect of people's lives. They don't like capitalism, they want a new world order and they say so.

IPCC Working Group III Co Chair Ottmar Eden has admitted that international climate policy is not even about environmental protection, it is about *"how we redistribute the world's wealth"* (2010). Decades in the making, the IPCC is very close to succeeding in an irrevocable way. The plan is to bolt it all together at Paris in December 2015 and have the world committed to a crazy debilitating tax scheme that is irrevocably agreed to. World wars have been caused by much lesser issues.

The man-made global warming project has been instigated into schools and universities and there are even entire courses available on the subject (that don't consider that the world is not actually warming). Children and students are being taught that man-made global warming is settled and not to be questioned or even discussed (Tice, 2015). The AGENDA 21, which stands for UN Agenda for the 21st Century, is being forced onto schools. It has been banned by some states in the USA but is being pushed very aggressively by the IPCC. It follows that those who question the matters get marked down in examinations and fail their exams. University students then vote for more of the same and it is self-perpetuating – and the taxpayer keeps paying trillions of dollars per year to have more and more well-paid unelected bureaucrats running people's lives.

President Obama is planning to bypass the USA Congress and the Senate by calling commitments to the Paris IPCC conference in December 2015 not treaty obligations but 'regulations'. This is effectively ignoring their constitution and is because Congress and the Senate are not in agreement. For the first time the extreme green left has a president backing them and they are determined to make the most of it by foul means or anyhow. The longer it takes the world to work it out, the more devastating will be the carnage that results in the interim.

What is going on is not anything much to do with climate. Simply put it is the manipulation of scare tactics to enable the old world idea of socialism to be imposed through the UN.

7. Some historical observations of popular opinions

Just because a view may be widely held is no reason it is correct. Mainstream consensus is in fact, most often incorrect. British philosopher Bertrand Russell OM said *“the fact that an opinion is widely held is no evidence whatever that it is not utterly absurd; indeed in view of the silliness of mankind a widespread belief is more likely to be foolish than sensible.”* It is akin to sheep following each other.

The manipulation of public opinion has been occurring, at the will of dictators and politicians, for centuries. In the history of mankind, mainstream consensus has been sought and established with drastic results. In World War Two, German politician and Reich Minister of Propoganda in Nazi Germany Paul Goebbels successfully convinced a significant proportion of the world’s population Hitler was a great man. (It was World War II and Germany had many allies who looked to Hitler as a great leader. Not to mention the German population)

As discussed in section 4 of this paper, this type of ‘consensual’ thinking has formed the bulk of the case for man-made global warming by IPCC. A so-called ‘consensus’ of scientists supposedly agree with the IPCC. However, science is not a matter of votes – it is a matter of fact. If nine people have a view, it does not mean that view is correct – the correct view may be held by one person.

John Michael Crichton, an author admired for his meticulous scientific research, said (2003) *“I regard consensus science as an extremely pernicious development that ought to be stopped dead in its tracks. Historically the claim has been the first refuge of scoundrels. It is a way to avoid debate by claiming that the matter is already settled. Whenever you hear the consensus of scientists agree on something or other, reach for your wallet because you are about to be had. There is no such thing as consensus science. If it's consensus, it isn't science. If it's science, it isn't consensus. Period.”*

Fuelling ‘consensus’ thinking’, are plenty of enthusiastic activists in the world, who demonstrate and/or sign petitions about environmental ‘concerns’ without any profound knowledge of what they are demonstrating about. USA TV programme, Penn & Teller (2006), at a climate change meeting, sought to ban ‘di-hydrogen monoxide’ because *“it is in our lakes and reservoirs, used by pesticide companies, we wash fruit with it and it gets into our food supplies. It causes excessive sweating and excessive urination.”* Hundreds of people signed the petition ‘to help save the planet’ from this nasty chemical without recognizing di-hydrogen monoxide (H₂O) is water!

These examples substantiate and explain how multitudes have flocked after IPCC dogma without genuine consideration of the underlying truth.

8. Consequences for NZ

Think how much better NZ standards of living would be compared to all those nations that pay trillions of dollars to the man-made global warming cause for nothing – if NZ politicians would just spend enough time to sensibly consider the true climate science. Instead man-made global warming legislation is going into our laws, local governments are buying carbon credits, all Kiwis pay extra taxes on fuel, the Emission Trading Scheme will further hamper the country, planning decisions are being based on IPCC projections, and so on.

The NZ advisor to Government on these matters is NIWA. Their basic views on man-made global warming stem from a thesis being written by a now sacked senior NIWA official. The thesis has not been available for public scrutiny and has been supposedly “lost” – this is a very concerning starting place to set up taxing the population under an Emission Trading Scheme. **Alarmingly, NIWA has followed the flawed IPCC dogma.**

New Zealanders cannot afford to pour money into this scam just because other nations are. The real science and the real agenda must be considered. There is no doubt as to the real agenda – it is even admitted by some of the leaders of the man-made global warming movement. If IPCC get their way in Paris, the world will be irrevocably launched into their scam – as treaty agreements cannot be reversed. Defense budgets will need to be paid so the UN can run a world-armed force. Socialism will be pushed to new levels. Our schools and universities will be indoctrinated. That is the new world order so desperately sought. It all will have nothing to do with climate change – as it never did.

NZ will be ruled by unelected bureaucrats who will do nothing to create wealth. All aspects of Kiwis’ lives will be meddled with – with permits required for everything, confiscating taxes, discretionary spending money not allowed for, limited private asset ownership – and maximum state ownership of assets, and in effect one might as well live in Cuba – if you had the money to get there.

Over the last 50-60 years, NZ has fallen from the top 2-3 countries in the world in GDP per capita to number 28. Furthermore our growth rate per capita in 2014 was down to number 78. This is very unimpressive. **It is totally ridiculous for this country, or any country, to be pouring huge sums of money into the non-solution to a non-problem that reducing carbon emissions is to global warming. The return on the massive funds expended will be zero or negative.**

9. Concluding points to remember

- The world is not warming
- CO2 is not causing significant global warming
- CO2 exists naturally in air – 96% of it is produced by the planet naturally
- It is not agreed that man's activities are causing the increase in CO2 in the atmosphere
- There are not increased climatic disasters occurring
- Fraudulent data manipulation is rife
- The biggest scam the world has ever seen is happening -
- The UN IPCC has a very serious political agenda masquerading as preventing global warming
- The Paris IPCC conference in December 2015 should be boycotted
- Existing carbon reduction programmes should be abandoned

THE RECOMMENDATION OF THIS PAPER TO THE MINISTRY FOR THE ENVIRONMENT IS -

- 1. Boycott the Paris IPCC conference in December 2015**
- 2. Abandon existing carbon reduction programmes**

In recent years his public speaking has garnered attention due to his advocacy of climate change denial, views on the European Union, and social policy.

Moore P, Dr Patrick. Cofounder of Greenpeace and now global warming realist

Morano, M. Marc (born 1968) is a conservative American publisher. He has worked on different assignments in the Washington political scene, but is best known as founder of the website **Climate Depot**, a project of the Committee for a Constructive Tomorrow. Morano was born

in Washington, D.C. and raised in McLean, Virginia. He has a bachelor's degree from George Mason University in political science. Currently serves as Communications Director for the Committee For A Constructive Tomorrow and executive editor and chief correspondent for the award-winning ClimateDepot.com, a global warming and eco-news center founded in 2009. Morano spearheaded the 2007 groundbreaking report of 400-plus dissenting scientists and the follow-up 2008 report of 650-plus scientists dissenting man-made global warming fears; by 2010, a new 321-page "Climate Depot Special Report" listed over 1,000 international scientists who had turned against the UN IPCC. Morano's EPW website won a Golden Mouse Award in 2007 for improving communications between Members of Congress and their constituents. In February 2010, Accuracy in Media awarded Morano their annual Reed Irvine Award alongside Andrew Breitbart, and in July 2010, Doctors for Disaster Preparedness announced it would award Morano that year's Petr Beckmann Award.

Pielke, Roger A, Sr (born 1946). An American meteorologist with interests in climate variability and climate change, environmental vulnerability, numerical modeling, atmospheric dynamics, land/ocean – atmosphere interactions, and Large Eddy/turbulent boundary layer modeling. He particularly focuses on mesoscale weather and climate processes but also investigates on the global, regional, and microscale. Pielke is an ISI Highly Cited Researcher.

Pielke, Roger A, Jr. (born 1968). An American political scientist and professor in the Environmental Studies Program and a Fellow of the Cooperative Institute for Research in Environmental Sciences (CIRES) where he served as Director of the Center for Science and Technology Policy Research at the University of Colorado Boulder from 2001 to 2007. Pielke was a visiting scholar at Oxford University's Saïd Business School in the 2007-2008 academic year.

Robson A, Dr Alex 'Austalia's Carbon Tax, an economic evaluation' 2013 – N.B. unemployment also went from 604,000 to 720,000, emissions increased, and electricity prices rose approximately 20%.

Russell B, Bertrand Arthur William - 3rd Earl Russell, OM, FRS was a British philosopher, logician, mathematician, historian, writer, social critic and political activist.

Salby, M. Atmospheric scientist - see <http://notrickszone.com/2013/03/02/most-of-the-rise-in-co2-likely-comes-from-natural-sources/#sthash.GVc8EEjO.dpuf>

Swart et al. 2015. *'Influence of internal variability on Arctic sea – ice trends.'* Nature Climate Change

Tice, P. (2015) *'Schoolroom Climate Change Indoctrination.'* Wall St Journal.

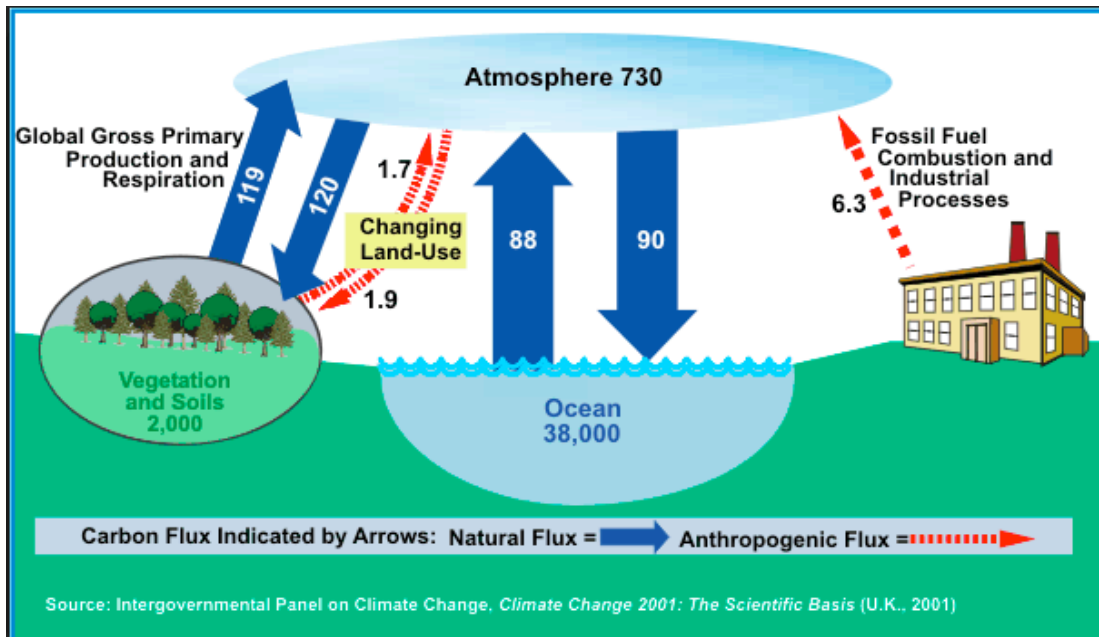

USA Today 2015. *COLDEST AIR IN DECADES, Arctic cold front is responsible for the coldest temperatures in almost two decades in many USA cities. Temperatures in some areas have not been this low since the arctic outbreaks of January 1997, February 1996 and January of 1994.*

11. Appendices

Appendix A

Temperature change fabricated by NOAA purposefully “cools” the historical monthly figures prior to 1951 then purposefully “warms” the historical monthly records. The combination of “cooling” and “warming” is done to promote ideas that modern warming is accelerating.

Appendix B – CO₂ to and from the atmosphere

Appendix C – Data Manipulation

There are numerous concerns regarding manipulation of data in relation to reports and general information regarding ‘global warming’.

Three themes are apparent (Morano, 2015):

- (1) Prominent scientists central to the global warming debate are taking measures to conceal rather than disseminate underlying data and discussions;
- (2) These scientists view global warming as a political “cause” rather than a balanced scientific inquiry
- (3) Many of these scientists frankly admit to each other that much of the science is weak and dependent on deliberate manipulation of facts and data'

The following (click through to actual reports) are some of the concerns posted by Morano (2015):

Weather station temperature claims overheated, report claims: U.S. temp record ‘U.S. has been systematically overinflated due to faulty data manipulation and ‘encroaching urbanity’ 'They started making what they called corrections after the year 2000, which turned the USA temperature trend from completely flat to fairly steep warming. The corrections were changing the temperature record. Several large adjustments hadn't been documented at all, boosting readings by as much as 1.5 degrees over older measurements'

All Claimed July Warming In The US Is Due To Data Manipulation

SHCN has adjusted recent US July temperatures upwards by 1.5 degrees F, relative to the 1890s. The adjusted July graph shows about 1.5 degrees of warming since 1895'.

Meteorologist D’Aleo: NOAA and NASA Complicit in Data Manipulation

Flashback: Meteorologist Anthony Watts: ‘In the business world, people go to jail for such manipulations of data’

Watts: 'Is history malleable? Can temperature data of the past be molded to fit a purpose? It certainly seems to be the case here, where the temperature for July 1936 reported ... changes with the moment'

‘Adjustments breathtaking’ – to Arctic temperature record – is there any ‘global warming’ we can trust?

Satellites: Warming pause continues & 2014 not the hottest

UK Telegraph on new climategate: ‘Fiddling with temperature data is the biggest science scandal ever’
