Objectives for the contribution

Do you agree with these objectives for our contribution? No

1b. What is most important to you?

To manage the effects of climate change linked to the sun and to random events, NOT to contrived computer-modelling linked to human-related emissions.

What would be a fair contribution for New Zealand?

2. What do you think the nature of New Zealand's emissions and economy means for the level of target that we set? We should not set a target as it will have no effect on climate change.

How will our contribution affect New Zealanders?

3. What level of cost is appropriate for New Zealand to reduce its greenhouse gas emissions? For example, what would be a reasonable reduction in annual household consumption?

No level of cost is appropriate for New Zealand as it will have no effect on climate change.

4. Of the opportunities for New Zealand to reduce its emissions (as outlined on page 15 of the discussion document), which do you think are the most likely to occur, or be most important for New Zealand?

No reduction of emissions is appropriate for New Zealand as it will have no effect on climate change.

Summary

5. How should New Zealand take into account the future uncertainties of technologies and costs when setting its target? New Zealand should set no target as it will have no effect on climate change.

Other comments

6. Is there any further information you wish the Government to consider? Please explain.

Yes.

1. The Government should avoid all actions based on computer modelling which is ridiculed by many eminent scientists.

2. The Government should explain in whose bank account now sits the millions of dollars of tax added to petrol price for "climate change".
