Submission on behalf of Ngati Tamaoho on the Government’s discussion document on the National Policy Statement for Fresh Water Management.

Ngati Tamaoho supports in full the "Action for healthy waterways: A discussion document on national direction for our essential freshwater".

With the exception that there is no consideration of our underground freshwater aquifer, for the management of allocation or the mandatory provision of clean water recharge. Ngati Tamaoho would also like consideration of urban wetlands and their possible use in a stormwater treatment function, providing the natural wetland has a forebay for cleaning and maintenance purposes. This will ensure the ongoing health and function of the wetland.
