To whom it may concern, I am very concerned about the government's latest changes to the regulations on water quality. The level of nitrogen being allowed is at a level where the water is not longer able to support life; a toxicity worst than the yangtse River in China.

Please consider our precious environment and the 67% of our native freshwater fish species which are currently endangered. Please listen to the advice of those who have studied these areas, rather than just thinking about making gains for business.

yours sincerely,  
Linda Jan hamill
