

Please register my opposition to reducing the National Policy on Freshwater Management to allow levels of contaminants making them unsafe for swimming.

I want Section 4.3 Compulsory Value to be set at a swimmable/ safe immersion level.

Anything less than this is completely unacceptable and will be the end of our clean green marketing machine, thus cause permanent damage to the Dairy Industry image, sales, profits and position in the world. We need to clean up farm practices and waterways and raise the bar, not lower our standards at all.
