

To whom it may concern,

I am writing this submission as I am concerned that not enough is being done to protect our waterways. We are all entitled to our rivers and waterways being kept in the very best condition possible, that our freshwater species are able to survive and that as food for everyone that uses the rivers as resource the fish is safe to eat. Also the rivers should be safe to swim in and in most cases the water clean enough to drink.

It's unacceptable that we don't manage our rivers and have the highest water quality possible. I think the latest proposals don't go anywhere near enough to addressing the concerns that many of us who use our rivers frequently for food gathering have.

Yours sincerely

Alistair Rieger
