Objectives for the contribution

Do you agree with these objectives for our contribution? No

1b. What is most important to you? That NZ follow the science.

What would be a fair contribution for New Zealand?

2. What do you think the nature of New Zealand's emissions and economy means for the level of target that we set?

No contribution at all. If we do anything a study of the increased productivity of our agriculture as a result of the higher CO2 levels would be good

How will our contribution affect New Zealanders?

3. What level of cost is appropriate for New Zealand to reduce it's greenhouse gas emissions? For example, what would be a reasonable reduction in annual household consumption? None

4. Of the opportunities for New Zealand to reduce its emissions (as outlined on page 15 of the discussion document), which do you think are the most likely to occur, or be most important for New Zealand? Hopefully none of them

Summary

5. How should New Zealand take into account the future uncertainties of technologies and costs when setting its target?

We know from observation of that our climate is as it always was. We need do nothing.

Other comments

6. Is there any further information you wish the Government to consider? Please explain.

I find amazing that any government would waste our resources on this nonsense when we face real problems of poverty and disease not just here but around the world
