

I want NZ to take a lead, challenge others. Do not say, "As a small country we will follow", but show leadership and boldness. In front of all those gathered, make a commitment – to reduce our CO2 emissions. State exactly what we are doing, and what we will do. Plant more trees, increase funding for more research on reducing CO2 from ruminants? Step up, and don't wait for others. Did we wait for the vote to women – spoke out against apartheid – stood up to USA on nuclear powered ships? Take a lead, please.
