Basil and Ann Graeme

[REDACTED]
[REDACTED]

1. We agree with the drivers
2. The Govt should meet the commitments made
3. Auctions are not a suitable mechanism to set a trading price
4. The Crown should set prices for carbon trading that are going to meet the objectives and be able to modify these with time to track implementation
5. The price for carbon should not be the same for those that are emitting from stores and those that are sequestering carbon or protecting carbon stores. The price can incentivise changes in carbon management.

We do not object to the publication of this submission .
