

30 April, 2016

To the ETS Review Panel:

Please give us an ETS that achieves its objective: to reduce New Zealand's greenhouse gas (GHG) emissions.

At the very least, please

1. Actually establish a sinking cap on our GHGs.
2. Get honest about the flaky ERUs bought mainly from the Ukraine and replace them with real carbon credits.
3. Establish a body that is independent of government to oversee the scheme.
4. Develop a plan for achieving a sinking emissions cap.

Please give us back our pride in our country for being an honest dealer.

I want a world that is fit for my now-teenage grandchildren to live in. Please help New Zealand to do it's bit to achieve that end.
