Objectives for the contribution

Do you agree with these objectives for our contribution? Yes

1b. What is most important to you?

To act in accordance with the actual science of this issue not the Political Lobbyists ideology.

What would be a fair contribution for New Zealand?

2. What do you think the nature of New Zealand's emissions and economy means for the level of target that we set?

<https://sites.google.com/site/nzchinatravels/climate-change>

In reality, not much needs to be done as we don't understand the causal relationships at all.

How will our contribution affect New Zealanders?

3. What level of cost is appropriate for New Zealand to reduce it's greenhouse gas emissions? For example, what would be a reasonable reduction in annual household consumption?

<https://sites.google.com/site/nzchinatravels/climate-change>

In reality, not much needs to be done as we don't understand the causal relationships at all.

4. Of the opportunities for New Zealand to reduce its emissions (as outlined on page 15 of the discussion document), which do you think are the most likely to occur, or be most important for New Zealand?

<https://sites.google.com/site/nzchinatravels/climate-change>

In reality, not much needs to be done as we don't understand the causal relationships at all.

Summary

5. How should New Zealand take into account the future uncertainties of technologies and costs when setting its target?

<https://sites.google.com/site/nzchinatravels/climate-change>

In reality, not much needs to be done as we don't understand the causal relationships at all.

Other comments

6. Is there any further information you wish the Government to consider? Please explain.
<https://sites.google.com/site/nzchinatravels/climate-change>

The dataset from the NASA satellite and Ballon programme and the comments of Prof John Christy, Dr Roy Spencer's and 31,000 other scientists that actually are involves with atmospheric research needs to be considered.

Prof Chris De'Fretas of Auckland University's paper is also included.
