Objectives for the contribution

Do you agree with these objectives for our contribution? Yes

1b. What is most important to you? Seeing the government do something that is not reactionary

What would be a fair contribution for New Zealand?

2. What do you think the nature of New Zealand's emissions and economy means for the level of target that we set? Looking for some help with generating excuses....smart

How will our contribution affect New Zealanders?

3. What level of cost is appropriate for New Zealand to reduce it's greenhouse gas emissions? For example, what would be a reasonable reduction in annual household consumption?

Do you think that maybe someone is capable of figuring out a method to both save money while reducing gas emissions? Think big guys!

4. Of the opportunities for New Zealand to reduce its emissions (as outlined on page 15 of the discussion document), which do you think are the most likely to occur, or be most important for New Zealand?

I would say that reducing the largest chunk (agricultural emissions) would be a good area for ruding our total.....

Summary

5. How should New Zealand take into account the future uncertainties of technologies and costs when setting its target?

The fact that technology gets cheaper with time and not more expensive. If the country as a whole invests in these areas they will create good local jobs while also helping us reach this cause.

Other comments

6. Is there any further information you wish the Government to consider? Please explain.

You guys are a bunch of knobs....the government is weak and only around because this country is full of complacent people who let you get away with it.
