[REDACTED]

**The climate** is certainly changing, but it's not the common man that's causing it to change. Climate change is clearly an externality of not just the fossil fuel industry, but also a corporate driven industry which dismantles many of the cultures that are trying to protected their ecosystems. In Dr Vandana Shiva's book 'Soil not Oil' she shows that 40 percent of the greenhouse gases are coming from a corporate-driven agriculture, which has substituted the ecological processes of regenerating the soil with chemical fertilizers and factory farming. Biodiversity economy is the sustainable alternative to the fossil fuel economy, because it reduces greenhouse gas emissions by emitting less and absorbing more Co2 from the atmosphere. In India her movement for biodiversity conservation and organic farming, which she started in 1987, helps farmers make a transition from fossil-fuel and chemical-based monocultures to biodiverse ecological systems nourished by the sun and the soil. So rather than changing harmful production and consumption patterns, influential scientist and corporations backed by governments have taken an approach to climate change by trying to re-engineer our planet, so that it can withstand the ravages of industry. This dangerous approach is called geoengineering or climate engineering and is defined as **"the deliberate large scale intervention in the earth's climate system in order to moderate global warming"**.

The US Air Force has already admitted that HAARP (High Frequency Active Auroral Research Projects) is being used for weather modification in Alaska. Because geoengineering changes our climate's temperature, it also disrupts the natural weather events, and causes a series of other events that mimic the consequences of climate change. By fixing the global warming range by changing the chemistry of the oceans, and polluting the upper atmosphere is dangerous, as well as **confusing the issue of climate change**.

**Geoengineering** involves large aircraft constantly spraying tiny particles into the atmosphere. It has been going on since the 1800's, but usage went up in the 1940s and 1950s for warfare amplification. Weather-modification, according to US Air Force document AF 2025 Final Report, 'offers the war fighter a wide range of possible options to defeat or coerce an adversary' and, it says, extend to the triggering of floods, hurricanes, droughts and earthquakes.

Many scientists have stated that purposefully disturbing the atmosphere with aerosol spraying could have major and even disastrous consequences.

The contents of these spraying formulas vary everywhere, however the most common elements present, and in the largest concentrations are always aluminium, barium and strontium, among many other known nefarious contents.

By placing sun-deflecting aluminium foil in the sky does reduce the amount of direct sunlight from reaching the earth, but the consequences are enormous for human health, tree and plant health (due to lack of photosynthesis), oceans, weather, climate, solar power production and crop production. Solar Radiation Management experiments only "mask" temperature or global warming...**this is not a fix.**

The water vapour, sulphur or aluminium oxides gases used to make the small particles in the atmosphere are continuously falling back to earth polluting our air, water and soils. **I am totally opposed to solar radiation management on the basis that it is exacerbating, not mitigating, global warming.**

**Solar radiation management** is the brainchild of Freeman Dyson, and was later adopted by Edward Teller: both central personages in nuclear weapons development. Sadly these climate engineering programs have already been going on for decades in secret **without our knowledge or consent.** Right now, after over 40 years of secret geoengineering, our global environment is on a dead end collision from these **toxic aerosol climate engineering particulates saturating our waters, land, and air.**

**Due to increase of 'global dimming'**, over 20% of the sun's direct rays are no longer reaching the planet, causing an increase in diseases based on vitamin D deficiency, like Rickets, due to lack of sunlight on the skin. All toxic metal particulates are rapidly absorbed from the respiratory system and / or the gastrointestinal tract and are deposited in the lungs, muscles, and bone. All people and animals are inhaling these toxins while breathing.

It has been demonstrated in the scientific and medical literature that nano-sized particles are infinitely more reactive and induce intense inflammation in a number of tissues. Of special concern is the effect of these nanoparticles on the brain and spinal cord, as a growing list of neurodegenerative diseases, including Alzheimer's dementia, and Parkinson's disease are strongly related to exposure to environmental aluminium. Nanoparticles of aluminium are not only infinitely more inflammatory, they also easily penetrate the brain by a number of routes, including the blood and olfactory nerves (the smell nerves in the nose). Studies have shown that these particles pass along the olfactory neural tracts. The intranasal route of exposure makes spraying of massive amounts of nanoparticles of aluminium into the skies especially hazardous, as it will be inhaled by people of all ages. It is known that older people have the greatest reaction to this airborne aluminium. Inhaling this environmentally suspended aluminium will also produce inflammatory reaction within the lungs, which will pose a significant hazard to children and adults with asthma and pulmonary diseases. In addition to inhaling nanoparticles of aluminium, such spraying will saturate the ground, water and vegetation with high levels of aluminium. It is well known and documented, that long-term exposure to air pollution consisting of particulate matter, significantly increases the risk of dying from lung cancer and heart disease.

The principle dangers of inhaling particulate matter applies to smoke and second-hand smoke causing lung cancer. These dangers can be avoided, **while geoengineering particulate fallout cannot.** The highly toxic heavy metals we are exposed to from each of these sources is lethal enough, but when all these metals are combined, "synergistic toxicity" is unleashed, which makes the overall toxicity exponentially worse. **There is virtually no place on our planet to hide from the climate engineering fallout.**

There is overwhelming visual evidence demonstrating that geoengineering exist all over the world, **as well as here in New Zealand.** Thousands of images containing strange aerial spraying formations can be seen as well as numerous documentaries like [What in the World are They Spraying](#) and [Why in the World are They Spraying](#) which have been watched by millions of people.

**The United States' own Government Accountability Office** states "not one geoengineering technique is safe and their implementation could cause more damage than the supposed catastrophe they intend to avoid.

**The Neurotoxicology (brain poisoning) division of the U.S. Environmental Protection Agency** says that exposure to airborne Particulate Matter "is an environmental health risk of global proportions.

Geoengineering can be seen regularly in both the **Northland and Southern skies of New Zealand**, both from the ground and in satellite imagery.

This process of 'seeding the atmosphere' with large amounts of fine particle aluminium - which has to be constantly renewed, has been seen in abundance across the South Island, Northland and central North Island of NZ. Aircrafts have been seen leaving long thick trails of a white substance that stays in the sky for many hours and spreads out to form milky, hazy, metallic looking clouds.

See <http://chemtrailsmorthnz.wordpress.com>

Increasing numbers of New Zealanders are voicing their concerns about the aluminium, barium and strontium contaminating their environment. Evidence shows the lingering plumes being discharged from the aircrafts are part of worldwide programs and not merely water vapour, but comprised of cocktails of heavy metals which are being found in rainwater. In a number of New Zealand rainwater samples, tested by '**Hill Laboratories**' they show concentrations of aluminium, barium, and strontium that is falling with the rain and from the atmosphere, which is accumulating in the environment and poisoning it slowly.

They are spraying somewhere in the United States skies every single day with aluminium, barium, strontium and other toxic compounds and throughout May of 2013, Southern California, home of 22 million people, they received by far the most powerful daily aerosol attacks. The sky remained whited-out and mountains ten miles away were barely visible due to toxic chemtrail fallout.

I feel strongly that **geoengineering must be stopped** before proceeding with any climate talks, treaties and climate change legislation and mandates taking place in December 2015.

Geoengineering makes it impossible to determine the rate the planet is warming. Climate change related treaties scheduled to be enacted this December will most likely include the solution to **solve the world from the global warming problem with climate geoengineering**. Because geoengineering is being sold as the quickest and most cost effective step in addressing the issue of global climate change, it is almost certain that climate treaties will include **the legalization of highly destructive geoengineering programs**.

The Inuit who live in the Arctic believe that the world is forever changing, whether at the hand of man or through natural cycles. It is known for a fact that way up in the high Arctic, there are mummified tree trunks showing that the Earth's climate was once totally different. Even stranger is the fact that the sun now appears to set many kilometres off its usual point on the horizon, and the stars are no longer where they should be. Is the Earth shifting on its axis causing the very look of the sun and stars to change? These are the drastic conditions for the Inuit, as their lives depend from childhood on their knowledge of the minute details of the Arctic land and skies they see all around them. When Inuit hunters talk about animals, they always talk about cycles, everything goes in cycles. They say we just have to adapt to it. Inuit's belief that along with pollution and environmental changes, **the Earth has actually changed its tilt**.

Over 30,000 US scientists have petitioned that climate change is a natural phenomenon and that carbon dioxide emissions are not a significant factor. <http://www.petitionproject.org/>

**Today, at a time of multiple crises, we need to move away from thinking of nature as dead matter, to valuing her biodiversity, her clean water, and her seeds. For this, we must let nature herself teach us, instead of trying to cheat her and pollute her with geoengineering. Every breathing organism is an unwitting participant in a massive biological experiment of unknown purpose. The seas, skies, and soils of our home planet should not be used as a laboratory for these unjust and risky technological fixes.**

**Why has the NZ Government** not informed the general public about all the atmospheric aerosol injections and spraying programmes – whether they are weather modification, geoengineering activities and HAARP. (High Frequency Active Auroral Research Projects. Why are these activities been allowed to **take place in NZ airspace without our knowledge or permission** These massive aerosol operations, which evidence shows are primarily being used to modify the weather, are continuing around the world and appear to being stepped up, including in **New Zealand**.

**I CONSIDER THIS AN ACT OF TREASON & CRIME AGAINST HUMANITY!!**

**Climate engineering is rapidly tearing apart the planet's life support systems and contaminating the entire biosphere. It is imperative that we expose and halt the climate engineering programs as fast as possible or we will soon have nothing left to salvage of our health or our once thriving planet.**
