

Dear Madame, dear Sir,

I would love for NZ's INDC to lead the way and set realistic but ambitious targets for everyone.

in particular, I think those points should be of major concern to us :

- stop the exploitation of fossil fuels as early as possible, and look for alternative ways of producing energy. Acknowledge that the only viable solution for our sustained future is to resort to renewable energy. Fossil fuel exploitation must be phased out.

- reach a Carbon Zero target by 2045, and set intermediate milestones to reach it

- consult with the people of NZ as often as possible, as they will be the ones bearing the effects if we do not do anything

- show the world the cost of inaction by quoting how much money is lost/spent in combatting effects that we should already consider as unacceptable

I trust you will read this short letter and do all you can to make us proud to be living in New Zealand.

Please receive my kindest regards

Patrick Wagner
