Objectives for the contribution

Do you agree with these objectives for our contribution? No

1b. What is most important to you?

There is no benefit to NZ from having a CO2 reduction target. We should exit all agreements that bind us to a target.

What would be a fair contribution for New Zealand?

2. What do you think the nature of New Zealand's emissions and economy means for the level of target that we set?

The prosperity of NZ citizens is critical and so the cost should be zero. We should abandon having a CO2 reduction target.

How will our contribution affect New Zealanders?

3. What level of cost is appropriate for New Zealand to reduce its greenhouse gas emissions? For example, what would be a reasonable reduction in annual household consumption?

4. Of the opportunities for New Zealand to reduce its emissions (as outlined on page 15 of the discussion document), which do you think are the most likely to occur, or be most important for New Zealand?

Summary

5. How should New Zealand take into account the future uncertainties of technologies and costs when setting its target?

We should not impose costs on our citizens while climate science remains a political campaign.

Other comments

6. Is there any further information you wish the Government to consider? Please explain.
