Objectives for the contribution

Do you agree with these objectives for our contribution? No

1b. What is most important to you?

To realise we are running out of time.

Start right away in using technology that we have in reducing emissions, everywhere.

What would be a fair contribution for New Zealand?

2. What do you think the nature of New Zealand's emissions and economy means for the level of target that we set? Economy changes with each generation.

We can change again.

How will our contribution affect New Zealanders?

3. What level of cost is appropriate for New Zealand to reduce it's greenhouse gas emissions? For example, what would be a reasonable reduction in annual household consumption?

There are many ways a household has and can reduce.

It is not households that we are talking about. Industry should be targeted for reduction and helped with change.

4. Of the opportunities for New Zealand to reduce its emissions (as outlined on page 15 of the discussion document), which do you think are the most likely to occur, or be most important for New Zealand?

Summary

5. How should New Zealand take into account the future uncertainties of technologies and costs when setting its target? Uncertainties of technologies ? What are we ? Luddites !

Other comments

6. Is there any further information you wish the Government to consider? Please explain. Just get some balls would you ! Self explanatory !
