## Objectives for the contribution

Do you agree with these objectives for our contribution? No

1b. What is most important to you?

A clean NZ. Renewable energy, less reliance on oil. Climate security especially for people in at risk areas

What would be a fair contribution for New Zealand?

2. What do you think the nature of New Zealand's emissions and economy means for the level of target that we set? minimum 40% reduction in carbon emmissions below 1990 levels by 2030

How will our contribution affect New Zealanders?

3. What level of cost is appropriate for New Zealand to reduce it's greenhouse gas emissions? For example, what would be a reasonable reduction in annual household consumption?

I don't consider the cost. I think the cost of action will increase as the delay to act continues. I also feel that the majority of the burden should be shouldered by big business and the very wealthy.

\$1800p/a.

4. Of the opportunities for New Zealand to reduce its emissions (as outlined on page 15 of the discussion document), which do you think are the most likely to occur, or be most important for New Zealand? 100% renewable electricity, biofuels and electric vehicles, increasing forestry

## Summary

5. How should New Zealand take into account the future uncertainties of technologies and costs when setting its target?

I'm unsure what to say, but technology will always change and we can't wait forever for the a perfect solution.

## Other comments

6. Is there any further information you wish the Government to consider? Please explain.
