To Tim Groser

Thank you for the opportunity to make a submission regarding the NZ government's climate change target.

Climate change is the single most important issue facing us today. Greenhouse gas emissions must be reduced. Merely purchasing of reductions (carbon offsets) will not achieve this. It is abysmal that New Zealand has increased it's own emissions by 21% since 1990.

Please adopt a target in net domestic greenhouse gas emissions of 40% below our 1990's levels by 2030.

Thank you  
Zena Wynyard-Smit
